REGULATIONS COURSE STRUCTURE AND SYLLABUS

SITE-18M REGULATIONS

For

Mechanical Engineering

With effective from the Academic Year 2020-21

Chapter – I

B.Tech. Regulations

1.1 Short title and Commencement

The regulations listed under this head are common for all degree level under graduate programs (B.Tech.) offered by the college with effect from the academic year 2020-21 and they are called as "SITE18M" regulations.

The regulations here under are subject to amendments as may be made by the Academic Council of the college from time to time, keeping the recommendations of the Board of Studies in view. Any or all such amendments will be effective from such date and to such batches of candidates including those already undergoing the program, as may be decided by the Academic Council.

1.2. Definitions

- a. "Commission" means University Grants Commission (UGC)
- b. "Council" means All India Council for Technical Education (AICTE)
- c. "University" Means Jawaharlal Nehru Technological University Kakinada (JNTUK)
- d. "College" means Sasi Institute of Technology & Engineering, Tadepalligudem.
- e. "Program" Means any combination of courses and /or requirements leading to award of a degree
- f. "Course" Means a subject either theory or practical identified by its course title and code number and which is normally studied in a semester.
- g. For example, (Data Structures) is a course offered at third semester of B.Tech (CST) and its code is (18MCSCST3020)
- h. "Degree" means an academic degree conferred by the university upon those who complete the undergraduate curriculum
- i. "Regular Student" means student enrolled into the four year program in the first year
- j. "Lateral entry Students" Means student enrolled into the four year program in the second year

1.3. Academic Programs

1.3.1. Nomenclature of Programs

The nomenclature and its abbreviation given below shall continue to be used for the degree programs under the University, as required by the Council and Commission. The

name of specialization shall be indicated in brackets after the abbreviation. For e.g. UG engineering degree in Mechanical Engineering program is abbreviated as B.Tech. (ME). Bachelor of Technology (B.Tech.) degree program offered in:

- 1. Civil Engineering(CE)
- 2. Computer Science and Engineering(CSE)
- 3. Computer Science and Technology(CST)
- 4. Electronics and Communication Engineering(ECE)
- 5. Electronics and Communication Technology(ECT)
- 6. Electrical and Electronics Engineering(EEE)
- 7. Information Technology(IT)
- 8. Mechanical Engineering(ME)
- Curriculum framework is important in setting the right direction for a Degree program as it takes into account the type and quantum of knowledge necessary to be acquired by a student to qualify for a award in his/her chosen branch or specialization.
- Besides, this also helps in assigning the credits for each course, sequencing the courses semester-wise and finally arriving at the total number of courses to be studied and the total number of credits to be earned by a student to fulfill the requirements for conferment of degree.
- Each theory course shall consist of five units.

1.3.2. Curriculum Structure

The curriculum structure is designed in such a way that it facilitates the courses required to attain the expected knowledge, skills and attitude by the time of their graduation as per the needs of the stakeholders. The curriculum structure consists of various course categories (as described in 1.6.3 to 1.6.9) to cover the depth and breadth required for the program and for the attainment of program outcomes of the corresponding program. Each Program of study will be designed to have 40-45 theory courses and 16-18 laboratory courses. The distribution and types of courses offered from the above is indicated in the following table 3.

1.3.3. Induction Program

The Induction Program for two weeks is designed to make the newly joined students feel comfortable, sensitize them towards exploring their academic interests and activities,

reducing competition and making them work for excellence, promote bonding within them, build relations between teachers and students and building of character. Induction program covers:

- Physical activity
- Creative arts
- Universal human values
- Literary and Proficiency modules
- Lectures by Eminent peoples

1.4Admission Criteria

The eligibility criteria for admission into UG engineering programs are as per the norms approved by government of Andhra Pradesh from time to time. The sanctioned seats in each program in the college are classified into CATEGORY-A and CATEGORY-B at first year level and Lateral Entry at second year level.

- **CATEGORY A Seats:** These seats will be filled as per the norms approved by the Government of Andhra Pradesh.
- **CATEGORY B Seats:** These seats will be filled by the College as per the norms approved by the Government of Andhra Pradesh.
- **CATEGORY Lateral Entry Seats:** Lateral entry candidates shall be admitted into the Third semester directly as per the norms approved by government of Andhra Pradesh. The percentages of Category-A, Category-B and Lateral Entry Seats are decided time to time by the Government of Andhra Pradesh.

2. Award of B. Tech. Degree

- a) A student will be declared eligible for the award of B. Tech. Degree if he fulfils the following academic regulations:
 - i. A student shall be declared eligible for the award of B. Tech Degree, if he pursues a course of study in not less than four and not more than eight academic years. After eight academic years from the year of their admission, he/she shall forfeit their seat in B.Tech course and their admission stands cancelled.
 - ii. The candidate shall register for 160 credits and secure all the 160 credits.
- b) The medium of instruction for the entire under graduate program in Engineering & Technology will be in **English** only.

3. Program Pattern:

a) Total duration of the of B. Tech (Regular) Program is four academic years

- b) Each Academic year of study is divided into Two Semesters.
- c) Minimum number of instruction days in each semester is 90.
- d) Grade points, based on percentage of marks awarded for each course will form the basis for calculation of SGPA (Semester Grade Point Average) and CGPA (Cumulative Grade Point Average).
- e) The total credits for the Program is 160.
- f) Three week induction program is mandatory for all first year UG students and shall be conducted as per AICTE/UGC/APSCHE guidelines.
- g) Student is introduced to "Choice Based Credit System (CBCS)".
- h) A pool of interdisciplinary and job-oriented mandatory skill courses which are relevant to the industry are integrated into the curriculum of concerned branch of engineering (total five skill courses: two basic level skill courses, one on soft skills and other two on advanced level skill courses)
- i) A student has to register for all courses in a semester.
- j) All the registered credits will be considered for the calculation of final CGPA.
- k) Each semester has 'Continuous Internal Evaluation (CIE)' and 'Semester End Examination (SEE)'. Choice Based Credit System (CBCS) and Credit Based Semester System (CBSS) as indicated by UGC and course structure as suggested by AICTE are followed.
- A 10 months industry/field mandatory internship, both industry and social, during the summer vacation and also in the final semester to acquire the skills required for job and make engineering graduates to connect with the needs of the industry and society at large.
- m) All the students shall be mandatorily registered for NCC, NSS activities and Community Service Project as per the Government and University norms.
- n) Each college shall assign a faculty advisor/mentor after admission to each student or group of students from same department to provide guidance in courses registration/career growth/placements/ opportunities for higher studies/GATE/other competitive exams etc.

4. Registration for Courses:

- a) In each semester a student shall mandatorily register courses which he/she wishes to pursue within a week from the starting of the class work with the advice of Head of the Department and mentor of the student of the concerned department of the college.
- b) If any student wishes to withdraw the registration of the course, he/she shall submit a letter to the Principal of the college through the Head of the Department and mentor within fifteen days.
- c) The concerned college shall thoroughly verify and upload the data/courses registered by each student in the university examination center within 20 days. The Principal of the concerned college shall ensure that there no wrong registration courses by the student. The university registration portal will be closed after 20 days.
- 5. (a) Award of B. Tech. Degree: A student will be declared eligible for the award of B. Tech. Degree if he fulfills the following academic regulations:
 - A student shall be declared eligible for award of the B. Tech Degree, if he pursues a course of study in not less than four and not more than eight academic years. After eight academic years from the year of their admission, he/she shall **forfeit** their seat in B. Tech course and their admission stands cancelled.
 - ii. The student shall register for 160 credits and must secure all the 160 credits.
 - iii. All students shall mandatorily register for the courses like Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge etc., shall be included in the curriculum as non-credit mandatory courses. Environmental Sciences is to be offered compulsorily as mandatory course for all branches. A student has to secure at least 40% of the marks allotted in the internal evaluation for passing the course and shall maintain 75% of attendance in the subject.
 - iv. All students shall mandatorily register for NCC/NSS activities and will be required to participate in an activity specified by NSS officer during second and third semesters. Grade shall be awarded as Satisfactory or Unsatisfactory in the mark sheet on the basis of participation, attendance, performance and behavior. If a student gets an unsatisfactory Grade, he/she shall repeat the above activity in the subsequent years, in order to complete the degree requirements.
 - v. Credits are defined as per AICTE norms.

(b) Award of B. Tech. (Honor)/B. Tech. (Minor): B. Tech. with Honors or a B. Tech. with a Minor will be awarded if the student earns 20 additional credits are acquired as per the regulations/guidelines. The regulations/guidelines are separately provided. Registering for an Honors/Minor is optional.

6. Attendance Requirements

- a) A student is eligible to write the University examinations if he acquires a minimum of 40% in each subject and 75% of attendance in aggregate of all the subjects.
- b) Condonation of shortage of attendance in aggregate up to 10% (65% and above, and below 75%) may be granted by the College Academic Committee. However, this Condonation concession is applicable only to any two semesters during the entire program.
- c) Shortage of Attendance below 65% in aggregate shall not be condoned.
- d) A student who is short of attendance in a semester may seek re-admission into that semester when offered within 4 weeks from the date of commencement of class work.
- e) Students whose shortage of attendance is not condoned in any semester are not eligible to write their end semester examination of that class.
- f) A stipulated fee of Rs. 1000/- in the concerned semester shall be payable towards Condonation of shortage of attendance. Students availing Condonation on medical ground shall produce a medical certificate issued by the competitive authority.
- g) A student will be promoted to the next semester if he satisfies the (i) attendance requirement of the present semester and (ii) minimum required credits.
- h) If any candidate fulfills the attendance requirement in the present semester, he shall not be eligible for readmission into the same class.
- i) For induction program attendance shall be maintained as per AICTE norms.
- j) For non-credit mandatory courses the students shall maintain the attendance similar to credit courses

7. Evaluation-Distribution and Weightage of marks

- i. Paper setting and evaluation of the answer scripts shall be done as per the procedures laid down by the University Examination section from time to time.
- To maintain the quality, external examiners and question paper setters shall be selected from reputed institutes like IISc, IITs, IIITs, IISERs, NITs and Universities.

- iii. For non-credit mandatory courses, like Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge, the student has to secure 40% of the marks allotted in the internal evaluation for passing the course. No marks or letter grade shall be allotted for all mandatory non-credit courses.
- iv. A student is deemed to have satisfied the minimum academic requirements if he has earned the credits allotted to each theory/practical design/drawing subject/ project etc by securing not less than 35% of marks in the end semester exam and minimum 40% of marks in the sum total of the internal marks and end semester examination marks together.

v. Distribution and Weightage of marks:

The assessment of the student's performance in each course will be as per the details given:

| S.No. | Components | Internal | External | Total |
|-------|--|----------|----------|-------|
| 1 | Theory | 30 | 70 | 100 |
| 2 | Engineering | 30 | 70 | 100 |
| 3 | Practical | 15 | 35 | 50 |
| 4 | Mini Project/Internship/Industrial Training/ Skill Development programs/Research Project | - | 50 | 50 |
| 5 | Project Work | 60 | 140 | 200 |

vi. Continuous Internal Theory Evaluation:

- a) For theory subjects, during a semester, there shall be two mid-term examinations. Each mid-term examination consists of (i) one online objective examination (20 multiple choice questions) for 10 marks for duration of 20 minutes (ii) one descriptive examination (3 full questions for 5 marks each) for 15 marks for duration of 90 minutes and (iii) one assignment for marks. All the internal exams shall be conducted as per university norms from first 50% of the syllabi.
- b) In the similar lines, the second online, descriptive examinations assignment shall be conducted on the rest of the 50% syllabus.
- c) The total marks secured by the student in each mid-term examination are evaluated for 30 marks. The first mid marks (Mid-1) consisting of marks of online objective examination, descriptive examination and assignment shall be submitted to the

University examination section within one week after completion of first mid examination.

- d) The mid marks submitted to the University examination section shall be displayed in the concerned college notice boards for the benefit of the students.
- e) If any discrepancy found in the submitted Mid-1 marks, it shall be brought to the notice of university examination section within one week from the submission.
- f) Second mid marks (Mid-2) consisting of marks of online objective examination, descriptive examination and assignment shall also be submitted to University examination section within one week after completion of second mid examination and it shall be displayed in the notice boards. If any discrepancy found in the submitted mid-2 marks, it shall be brought to the notice of university examination section within one week from the submission.
- g) Internal marks can be calculated with 80% Weightage for better of the two mids and 20% Weightage for other mid exam.

Example:

Mid-1 marks = Marks secured in

(Online examination-1 + descriptive examination-1 + one assignment-1)

Mid-2 marks = Marks secured in

(Online examination-2+descriptive examination-2+one assignment-2)

Final internal Marks = (Best of (Mid-1/Mid-2) marks x 0.8 + Least of (Mid-1/Mid-2) marks x 0.2)

h) With the above criteria, university examination section will send mid marks of all subjects in consolidated form to all the concerned colleges and same shall be displayed in the concerned college notice boards. If any discrepancy found, it shall be brought to the notice of university examination section through proper channel within one week with all proofs. Discrepancies brought after the given deadline will not be entertained under any circumstances.

vii. Semester End Theory Examinations Evaluation:

 a) The semester end examinations will be conducted university examination section for 70 marks consists of five questions carrying 14 marks each. Each of these questions is from one unit and may contain sub-questions. For each question there will be an "either" "or" choice, which means that there will be two questions from each unit and the student should answer either of the two questions.

- b) For practical subjects there shall be continuous evaluation during the semester for 15 internal marks and 35 end examination marks. The internal 15 marks shall be awarded as follows: day to day work 5 marks, Record-5 marks and the remaining 5 marks to be awarded by conducting an internal laboratory test. The end examination shall be conducted by the teacher concerned and external examiner appointed.
- c) For the subject having design and / or drawing, (such as Engineering Graphics, Engineering Drawing, Machine Drawing) and estimation, the distribution shall be 30 marks for internal evaluation (15 marks for continuous Assessment (day-to-day work) and 15 marks for internal tests) and 70 marks for end examination. There shall be two internal tests in a Semester for 15 marks each and final marks can be calculated with 80% Weightage for better of the two tests and 20% Weightage for other test and these are to be added to the marks obtained in day to day work.
- d) Evaluation of the summer internships: It shall be completed in collaboration with local industries, Govt. Organizations, construction agencies, Industries, Hydel and thermal power projects and also in software MNCs in the area of concerned specialization of the UG program. Students shall pursue this course during summer vacation just before its offering as per course structure. The minimum duration of this course is at least 6 weeks. The student shall register for the course as per course structure after commencement of academic year. A supervisor/mentor/advisor has to be allotted to guide the students for taking up the summer internship. The supervisor shall monitor the attendance of the students while taking up the internship. Attendance requirements are as per the norms of the University. After successful completion, students shall submit a summer internship technical report to the concerned department and appear for an oral presentation before the departmental committee consists of an external examiner; Head of the Department; supervisor of the internship and a senior faculty member of the department. A certificate from industry/skill development center shall be included in the report. The report and the oral presentation shall carry 40% and 60% Weightage respectively. It shall be evaluated for 50 external marks at the end of the semester. There shall be no internal marks for Summer Internship. A student shall secure minimum 40% of marks for successful completion. In case, if a student fails,

he/she shall reappear as and when semester supplementary examinations are conducted by the University.

- e) The job oriented skill courses may be registered at the college or at any accredited external agency. A student shall submit a record/report on the on the list skills learned. If the student completes job oriented skill course at external agency, a certificate from the agency shall be included in the report. The course will be evaluated at the end of the semester for 50 marks (record: 15 marks and viva-voce: 35 marks) along with laboratory end examinations in the presence of external and internal examiner (course instructor or mentor). There are no internal marks for the job oriented skill courses.
- f) Mandatory Course (M.C): Environmental Sciences, Universal Human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge etc non-credit (zero credits) mandatory courses. Environmental Sciences shall be offered compulsorily as mandatory course for all branches. A minimum of 75% attendance is mandatory in these subjects. There shall be an external examination for 70 marks and it shall be conducted by the college internally. Two internal examinations shall be conducted for 30 marks and a student has to secure at least 40% of the marks for passing the course. There is no online internal exam for mandatory courses. No marks or letter grade shall be printed in the transcripts for all mandatory non-credit courses, but only Completed (Y)/Not-completed (N) will be specified.
- g) Procedure for Conduct and Evaluation of MOOC: There shall be a Discipline Centric Elective Course through Massive Open Online Course (MOOC) as Program Elective course. The student shall register for the course (Minimum of 12 weeks) offered by SWAYAM/NPTEL through online with the approval of Head of the Department. The Head of the Department shall appoint one mentor for each of the MOOC subjects offered. The student needs to register the course in the SWAYAM/NPTEL portal. During the course, the mentor monitors the student's assignment submissions given by SWAYAM /NPTEL. The student needs to submit all the assignments given and needs to take final exam at the proctor center. The student needs to earn a certificate by passing the exam. The student will be awarded the credits given in curriculum only by submission of the certificate. In case if student does not pass subjects registered through SWAYAM/NPTEL, the same or alternative

equivalent subject may be registered again through SWAYAM/NPTEL in the next semester with the recommendation of HOD and shall be pass.

h) Major Project (Project - Project work, seminar and internship in industry):

In the final semester, the student should mandatorily register and undergo internship and in parallel he/she should work on a project with well-defined objectives. At the end of the semester the candidate shall submit an internship completion certificate and a project report. A student shall also be permitted to submit project report on the work carried out during the internship. The project report shall be evaluated with an external examiner.

Evaluation: The total marks for project work 200 marks and distribution shall be 60 marks for internal and 140 marks for external evaluation. The supervisor assesses the student for 30 marks (Report: 15 marks, Seminar: 15 marks). At the end of the semester, all projects shall be showcased at the department for the benefit of all students and staff and the same is to be evaluated by the departmental Project Review Committee consisting of supervisor, a senior faculty and HOD for 30 marks. The external evaluation of Project Work is a Viva-Voce Examination conducted in the presence of internal examiner and external examiner and is evaluated for 140 marks.

8 **Results Declaration:**

- i. Before results declaration, an academic council meeting shall be conducted and results shall be placed before the academic council for approval.
- ii. With the approval of academic council, the results shall be submitted to the University to get the Approval from Honourable Vice-Chancellor.
- iii. The University may normalize the result, if required, before declaration of the result (Guidelines for normalization will be provided separately)
- iv. A copy of approved results in a CD shall be submitted to the University Examination Center.
- 9. Academic Audit: Academic audit in each semester will be conducted as per norms.
- **10. Recounting or Re-evaluation of Marks in the End Semester Examination:** A student can request for recounting of revaluation of his/her answer book on payment of a prescribed fee as per norms.
- **11. Supplementary Examinations:** A student who has failed to secure the required credits can appear for a supplementary examination, as per the schedule announced by the University.

- **12. Malpractices in Examinations:** Disciplinary action shall be taken in case of malpractices during Mid/End examinations as per the rules framed by the University.
- **13. Promotion Rules:** The following academic requirements have to be satisfied in addition to the attendance requirements mentioned in <u>item no.5 for</u> promotion to higher classes
 - a) A student shall be promoted from first year to second year if he fulfills the minimum attendance requirement as per University norm.
 - b) A student will be promoted from II year to III year if he fulfills the academic requirement of 40% of credits up to either II year I-Semester or II year II-Semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in II year II semester.
 - c) A student shall be promoted from III year to IV year if he fulfills the academic requirements of 40% of the credits up to either III year I semester or III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

14. Course Pattern

- a) The entire course of study is for four academic years; all years are on semester pattern.
- b) A student eligible to appear for the end semester examination in a subject, but absent from it or has failed in the end semester examination, may write the exam in that subject when conducted next.
- c) When a student is detained for lack of credits / shortage of attendance, he may be readmitted into the same semester/year in which he has been detained. However, the academic regulations under which he was first admitted shall continue to be applicable to him.

15. Earning of Credit:

A student shall be considered to have completed a course successfully and earned the credits if he/she secures an acceptable letter grade in the range A+ to E as given below. Letter grade 'F' in any course implies failure of the student in that course and no credits earned. Absent is also treated as no credits earned. For project same % percentages will be followed for grading.

| Marks Range Max:100 | Marks range Max:50 | Level | Letter Grade | Grade point |
|------------------------|-----------------------|-------------|--------------|----------------|
| ≥ 90 | \geq 45 | Outstanding | A+ | 10 |
| \geq 80 to <89 | ≥40 to <44 | Excellent | А | 9 |
| ≥70 to <79 | \geq 35 to <39 | Very Good | В | 8 |

| ≥60 to <69 | ≥ 30 to < 34 | Good | С | 7 |
|------------|------------------------|--------------|----|---|
| ≥50 to <59 | ≥ 25 to ≤ 29 | Fair | D | 6 |
| ≥40 to <49 | ≥ 20 to < 24 | Satisfactory | Е | 5 |
| <40 | <20 | Fail | F | 0 |
| - | | Absent | AB | 0 |

16. Award of Class:

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B. Tech. Degree, he shall be placed in one of the following four classes:

| Class Awarded | CGPA to be secured | Remarks |
|------------------|----------------------------------|-------------|
| First Class with | ≥7.75 (Without any supplementary | From the |
| Distinction | appearance) | CGPA |
| First Class | ≥ 6.75 | secured |
| Second Class | \geq 5.75 to < 6.75 | from |
| Pass Class | \geq 5.00 to < 5.75 | 160 Credits |

17. Minimum Instruction Days:

The minimum instruction days for each semester shall be 90 working days. There shall be no branch transfers after the completion of the admission process. There shall be no transfer from one college/stream to another within the Constituent Colleges and Units of Jawaharlal Nehru Technological University Kakinada.

18. Withholding of Results:

If the student is involved in indiscipline/malpractices/court cases, the result of the student will be withheld.

19. Transitory Regulations

- a) Discontinued or detained candidates are eligible for re-admission as and when next offered.
- b) The re-admitted candidate will be governed by the rules & regulations under which the candidate has been admitted.
- c) In case of transferred students from other Universities, credits shall be transferred to JNTUK as per the academic regulations and course structure of JNTUK.
- d) The students seeking transfer to colleges affiliated to JNTUK from various other Universities / Institutions have to obtain the credits of any equivalent subjects as prescribed by JNTUK. In addition, the transferred candidates have to pass the failed

subjects at the earlier Institute with already obtained internal/sessional marks to be conducted by JNTUK.

20. Gap – Year:

Gap Year concept of Student Entrepreneur in Residence shall be introduced and outstanding students who wish to pursue entrepreneurship are allowed to take a break of one year at any time after I/II/III year to pursue entrepreneurship full time. This period shall be counted for the maximum time for graduation. An evaluation committee at university level shall be constituted to evaluate the proposal submitted by the student and the committee shall decide on permitting the student for availing the Gap Year.

21. General:

- a) Wherever the words "he", "him", "his", occur in the regulations, they include "she", "her", "hers".
- b) The academic regulation should be read as a whole for the purpose of any interpretation.
- c) In case of any doubt or ambiguity in the interpretation of the above rules, the decision of the Vice-Chancellor is final.
- d) The University may change or amend the academic regulations or syllabi at any time and the changes or amendments made shall be applicable to all the students with effect from the dates notified by the University.

ACADEMIC REGULATIONS (SITE18M) FOR B. Tech

(LATERAL ENTRY SCHEME)

Applicable for the students admitted into II year B. Tech. from the Academic Year 2021-22 onwards

1. Award of B. Tech. Degree

A student will be declared eligible for the award of B. Tech. Degree if he fulfills the following academic regulations:

- a) A student shall be declared eligible for the award of the B. Tech Degree, if he pursues a course of study in not less than three academic years and not more than six academic years. After six academic years from the year of their admission, he/she shall forfeit their seat in B. Tech course and their admission stands cancelled.
- b) The candidate shall register for 122 credits and secure all the 122 credits.
- 2. The attendance regulations of B. Tech. (Regular) shall be applicable to B. Tech (lateral entry)
- 3. **Promotion Rules:** A student shall be promoted from second year to third year if he fulfills the minimum attendance requirement.

A student shall be promoted from III year to IV year if he fulfills the academic requirements of 40% of the credits up to either III year I semester or III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

4. Award of Class

After a student has satisfied the requirement prescribed for the completion of the program and is eligible for the award of B. Tech. Degree, he shall be placed in one of the following four classes:

| Class Awarded | CGPA to be secured | Remarks |
|------------------|---------------------------|--------------------------|
| First Class with | \geq 7.75 (Without any | |
| Distinction | supplementary appearance) | From the CGPA secured |
| First Class | ≥ 6.75 | from 121 Credits from II |
| Second Class | \geq 5.75 to < 6.75 | Year to IV Year |
| Pass Class | \geq 5.00 to < 5.75 | |

The Grades secured, Grade points and Credits obtained will be shown separately in the memorandum of marks.

 All the other regulations as applicable to B. Tech. 4-year degree course (Regular) will hold good for B. Tech. (Lateral Entry Scheme)

COMMUNITY SERVICE PROJECT

Introduction

- 1. Community Service Project is an experiential learning strategy that integrates meaningful community service with instruction, participation, learning and community development
- 2. Community Service Project involves students in community development and service activities and applies the experience to personal and academic development.
- 3. Community Service Project is meant to link the community with the college for mutual benefit. The community will be benefited with the focused contribution of the college students for the village/ local development. The college finds an opportunity to develop social sensibility and responsibility among students and also emerge as a socially responsible institution.

Objective

Community Service Project should be an integral part of the curriculum, as an alternative to the 2 months of Summer Internships / Apprenticeships / On the Job Training, whenever there is an exigency when students cannot pursue their summer internships. The specific objectives are;

- 1. To sensitize the students to the living conditions of the people who are around them,
- 2. To help students to realize the stark realities of the society.
- 3. To bring about an attitudinal change in the students and help them to develop societal consciousness, sensibility, responsibility and accountability
- 4. To make students aware of their inner strength and help them to find new /out of box solutions to the social problems.
- 5. To make students socially responsible citizens who are sensitive to the needs of the disadvantaged sections.
- 6. To help students to initiate developmental activities in the community in coordination with public and government authorities.
- 7. To develop a holistic life perspective among the students by making them study culture, traditions, habits, lifestyles, resource utilization, wastages and its management, social problems, public administration system and the roles and responsibilities of different persons across different social systems.

Implementation of Community Service Project

- Every student should put in a minimum of **180 hours** for the Community Service Project during the summer vacation
- 2. Each class/section should be assigned with a mentor.
- Specific Departments could concentrate on their major areas of concern. For example, Dept. of Computer Science can take up activities related to Computer Literacy to different sections of people like - youth, women, house-wives, etc
- 4. A log book has to be maintained by each of the student, where the activities undertaken/involved to be recorded. The log book has to be countersigned by the concerned mentor/faculty in charge.
- 5. Evaluation to be done based on the active participation of the student and grade could be awarded by the mentor/faculty member.
- 6. The final evaluation to be reflected in the grade memo of the student.
- The Community Service Project should be different from the regular programs of NSS/NCC/Green Corps/Red Ribbon Club, etc.
- 8. Minor project report should be submitted by each student. An internal Viva shall also be conducted by a committee constituted by the principal of the college.
- 9. Award of marks shall be made as per the guidelines of Internship/apprentice/ on the job training

Procedure

- 1. A group of students or even a single student could be assigned for a particular habitation or village or municipal ward, as far as possible, in the near vicinity of their place of stay, so as to enable them to commute from their residence and return back by evening or so.
- 2. The Community Service Project is a twofold one
 - a) First, the student/s could conduct a survey of the habitation, if necessary, in terms of their own domain or subject area. Or it can even be a general survey, incorporating all the different areas. A common survey format could be designed. This should not be viewed as a duplication of work by the Village or Ward volunteers; rather, it could be another primary source of data.
 - b) Secondly, the student/s could take up a social activity, concerning their domain or subject area. The different areas, could be like –
 - Agriculture

- Health
- Marketing and Cooperation
- Animal Husbandry
- Horticulture
- Fisheries
- Sericulture
- Revenue and Survey
- Natural Disaster Management
- Irrigation
- Law & Order
- Excise and Prohibition
- Mines and Geology
- Energy
- Internet
- Free Electricity
- Drinking Water

EXPECTED OUTCOMES BENEFITS OF COMMUNITY SERVICE PROJECT TO STUDENTS

Learning Outcomes

- 1. Positive impact on students' academic learning.
- 2. Improves students' ability to apply what they have learned in "the real world".
- 3. Positive impact on academic outcomes such as demonstrated complexity of understanding, problem analysis, problem-solving, critical thinking, and cognitive development.
- 4. Improved ability to understand complexity and ambiguity.

Personal Outcomes

- 1. Greater sense of personal efficacy, personal identity, spiritual growth, and moral development.
- 2. Greater interpersonal development, particularly the ability to work well with others, and build leadership and communication skills

Social Outcomes

- 1. Reduced stereotypes and greater inter-cultural understanding
- 2. Improved social responsibility and citizenship skills
- 3. Greater involvement in community service after graduation

Career Development

- 1. Connections with professionals and community members for learning and career opportunities
- 2. Greater academic learning, leadership skills, and personal efficacy can lead to greater opportunity

Relationship with the Institution

- 1. Stronger relationships with faculty
- 2. Greater satisfaction with college
- 3. Improved graduation rates

BENEFITS OF COMMUNITY SERVICE PROJECT TO FACULTY MEMBERS

- 1. Satisfaction with the quality of student learning
- 2. New avenues for research and publication via new relationships between faculty and community
- 3. Providing networking opportunities with engaged faculty in other disciplines or institutions
- 4. A stronger commitment to one's research

BENEFITS OF COMMUNITY SERVICE PROJECT TO COLLEGES AND UNIVERSITIES

- 1. Improved institutional commitment
- 2. Improved student retention
- 3. Enhanced community relations

BENEFITS OF COMMUNITY SERVICE PROJECT TO COMMUNITY

- 1. Satisfaction with student participation
- 2. Valuable human resources needed to achieve community goals
- 3. New energy, enthusiasm and perspectives applied to community work
- 4. Enhanced community-university relations.

SUGGESTIVE LIST OF PROGRAMS UNDER COMMUNITY SERVICE PROJECT

The following the recommended list of projects for engineering students. The lists are not exhaustive and open for additions, deletions and modifications. Colleges are expected to focus on specific local issues for this kind of projects. The students are expected to carry out these projects with involvement, commitment, responsibility and accountability. The mentors of a group of students should take the responsibility of motivating, facilitating, and guiding the students. They have to interact with local leadership and people and appraise the objectives and benefits of this kind of projects. The project reports shall be placed in the college website for reference. Systematic, Factual, methodical and honest reporting shall be ensured.

For Engineering Students

- 1. Water facilities and drinking water availability
- 2. Health and hygiene
- 3. Stress levels and coping mechanisms
- 4. Health intervention programs
- 5. Horticulture
- 6. Herbal plants
- 7. Botanical survey
- 8. Zoological survey
- 9. Marine products
- 10. Aqua culture
- 11. Inland fisheries
- 12. Animals and species
- 13. Nutrition
- 14. Traditional health care methods
- 15. Food habits
- 16. Air pollution
- 17. Water pollution
- 18. Plantation
- 19. Soil protection
- 20. Renewable energy
- 21. Plant diseases
- 22. Yoga awareness and practice
- 23. Health care awareness programs and their impact
- 24. Use of chemicals on fruits and vegetables
- 25. Organic farming
- 26. Crop rotation
- 27. Floury culture
- 28. Access to safe drinking water
- 29. Geographical survey
- 30. Geological survey

- 31. Sericulture
- 32. Study of species
- 33. Food adulteration
- 34. Incidence of Diabetes and other chronic diseases
- 35. Human genetics
- 36. Blood groups and blood levels
- 37. Internet Usage in Villages
- 38. Android Phone usage by different people
- 39. Utilization of free electricity to farmers and related issues
- 40. Gender ration in schooling level- observation.

Complimenting the community service project, the students may be involved to take up some awareness campaigns on social issues/special groups. The suggested lists of programs are;

Programs for School Children:

- 1. Reading Skill Program (Reading Competition)
- 2. Preparation of Study Materials for the next class.
- 3. Personality / Leadership Development
- 4. Career Guidance for X class students
- 5. Screening Documentary and other educational films
- 6. Awareness Program on Good Touch and Bad Touch (Sexual abuse)
- 7. Awareness Program on Socially relevant themes.

Programs for Women Empowerment

- 1. Government Guidelines and Policy Guidelines
- 2. Women's' Rights
- 3. Domestic Violence
- 4. Prevention and Control of Cancer
- 5. Promotion of Social Entrepreneurship

General Camps

- 1. General Medical camps
- 2. Eye Camps
- 3. Dental Camps
- 4. Importance of protected drinking water
- 5. ODF awareness camp
- 6. Swatch Bharat

- 7. AIDS awareness camp
- 8. Anti Plastic Awareness
- 9. Programs on Environment
- 10. Health and Hygiene
- 11. Hand wash programs
- 12. Commemoration and Celebration of important days

Programs for Youth Empowerment

- 1. Leadership
- 2. Anti-alcoholism and Drug addiction
- 3. Anti-tobacco
- 4. Awareness on Competitive Examinations
- 5. Personality Development

Common Programs

- 1. Awareness on RTI
- 2. Health intervention programs
- 3. Yoga
- 4. Tree plantation
- 5. Programs in consonance with the Govt. Departments like
 - i. Agriculture
 - ii. Health
 - iii. Marketing and Cooperation
 - iv. Animal Husbandry
 - v. Horticulture
 - vi. Fisheries
 - vii. Sericulture
 - viii. Revenue and Survey
 - ix. Natural Disaster Management
 - x. Irrigation
 - xi. Law & Order
 - xii. Excise and Prohibition
 - xiii. Mines and Geology
 - xiv. Energy

Role of Students:

- 1. Students may not have the expertise to conduct all the programs on their own. The students then can play a facilitator role.
- 2. For conducting special camps like Health related, they will be coordinating with the Government agencies.
- 3. As and when required the College faculty themselves act as Resource Persons.
- 4. Students can work in close association with Non-Governmental Organizations like Lions Club, Rotary Club, etc or with any NGO actively working in that habitation.
- 5. And also, with the Governmental Departments. If the program is rolled out, the District Administration could be roped in for the successful deployment of the program.
- 6. An in-house training and induction program could be arranged for the faculty and participating students, to expose them to the methodology of Service Learning.

Timeline for the Community Service Project Activity

Duration: 8 weeks

- 1. Preliminary Survey (One Week)
 - a) A preliminary survey including the socio-economic conditions of the allotted habitation to be conducted.
 - b) A survey form based on the type of habitation to be prepared before visiting the habitation with the help of social sciences faculty. (However, a template could be designed for different habitations, rural/urban.
 - c) The Governmental agencies, like revenue administration, corporation and municipal authorities and village secretariats could be aligned for the survey.

2. Community Awareness Campaigns (Two Weeks)

Based on the survey and the specific requirements of the habitation, different awareness campaigns and programs to be conducted, spread over two weeks of time. The list of activities suggested could be taken into consideration.

3. Community Immersion Program (Four Weeks)

Along with the Community Awareness Programs, the student batch can also work with any one of the below listed governmental agencies and work in tandem with them. This community involvement program will involve the students in exposing themselves to the experiential learning about the community and its dynamics. Programs could be in consonance with the Govt. Departments.

4. Community Exit Report (One Week)

During the last week of the Community Service Project, a detailed report of the outcome of the 8 weeks works to be drafted and a copy shall be submitted to the local administration. This report will be a basis for the next batch of students visiting that particular habitation. The same report submitted to the teacher-mentor will be evaluated by the mentor and suitable marks are awarded for onward submission to the University.

Throughout the Community Service Project, a daily log-book need to be maintained by the students batch, which should be countersigned by the governmental agency representative and the teacher-mentor, who is required to periodically visit the students and guide them.

Course Numbering Scheme

The Course number code consists of 11 alphabets. A typical course number code is illustrated in the following Figure-1.

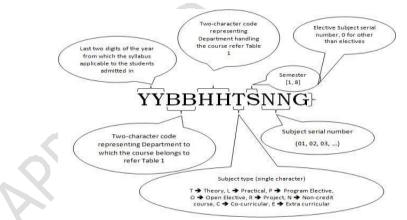

Figure 1: Course Numbering Scheme

The department codes are in given in following table 1.

Table 1: Department Codes

| Department | Two-character code |
|---|-----------------------|
| Civil Engineering | CE |
| Electrical & Electronics Engineering | EE |
| Mechanical Engineering | ME |
| Electronics & Communication Engineering | EC |
| Electronics & Communication Technology | ET |
| Computer Science and Engineering | CS |
| Computer Science and Technology | СТ |

| Information Technology | IT |
|------------------------|----|
| Management Science | MS |
| Mathematics | MA |
| Physics | РН |
| Chemistry | СН |
| English | EG |
| Biology | BI |
| Common to All Branches | СМ |

Example: STLD in 3rd semester for ECE with S. No 2

Course Code: 18ECECT3020

DISCIPLINARY ACTION FOR MALPRACTICES /IMPROPER CONDUCT IN

EXAMS

| S. | Nature of Malpractices/Improper | Punishment |
|-----------|--|--|
| No. | conduct | i unismitent |
| | If the candidate: | |
| 1. (a) | Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination) | Expulsion from the examination hall and cancellation of the performance in that subject only. |
| 1. (b) | Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter. | Expulsion from the examination hall and cancellation of the performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him. |
| 2. | Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the candidate is appearing. | Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that Semester/year. The Hall Ticket of the candidate is to be cancelled and sent to the University. |
| 3. | Impersonates any other candidate in connection with the examination. | The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the seat. The performance of the original candidate, who has been impersonated, shall be |

| 4. | Smuggles in the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination. | cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him. Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is aubient to the continuation |
|----|--|--|
| | | |
| 5. | Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks. | Cancellation of the performance in that subject. |
| 6. | Refuses to obey the orders of the Chief Superintendent/Assistant – | In case of students of the college, they shall be expelled from |

| | Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination. | examination halls and cancellation of their performance in that subject and all other subjects the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The candidates also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them. |
|----|--|---|
| 7. | Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall. | Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. |
| 8. | Possess any lethal weapon or firearm in the examination hall. | Expulsion from the examination hall and cancellation of the |

| 9. | If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8. | performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Student of the colleges expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over |
|-----|---|---|
| 10. | Comes in a drunken condition to the examination hall. Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny. | to police and, a police case will be registered against them. Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations. |

| | If any malpractice is detected which is |
|-----|--|
| | not covered in the above clauses 1 to 11 |
| 12. | shall be reported to the University for |
| | further action to award suitable |
| | punishment. |

MALPRACTICES

- The Principal shall refer the cases of malpractices in Continuous Evaluation and Semester-End Examinations, to Malpractice Enquiry Committee, constituted by him/her for the purpose. Such committee shall follow the approved scales of punishment. The Principal shall take necessary action, against the erring students based on the recommendations of the committee.
- Any action on the part of student at an examination trying to get undue advantage in the performance or trying to help another, or derive the same through unfair means is punishable according to the provisions contained hereunder. The involvement of the Staff, who are in charge of conducting examinations, valuing examination papers and preparing/keeping records of documents relating to the examinations in such acts (inclusive of providing incorrect or misleading information) that infringe upon the course of natural justice to one and all concerned at the examination shall be viewed seriously and recommended for award of appropriate punishment after thorough enquiry.

Ragging

Prohibition of ragging in educational institutions Act 26 of 1997 Salient Features

- Ragging within or outside any educational institution is prohibited.
- Ragging means doing an act which causes or is likely to cause Insult or Annoyance of Fear or Apprehension or Threat or Intimidation or outrage of modesty or Injury to a student.

| Course Outcomes | |
|--|--|
| On Completion of the course student will acquire | |
| 1. Ability to understand Scientific vocabulary and use them confidently | |
| 2. Familiarity with the basic principles of writing clear sentences and paragraphs | |
| 3. Ability to write error free simple technical passages | |
| 4. Knowledge of writing different writing styles | |
| 5. Confidence to write letters and technical reports clearly and coherently | |
| 6. Get inspired by achievements and values upheld by a renowned technocrat. | |
| Ouestion Paper Pattern | |

Section –A

- 1. 10 questions carrying one mark each
- 2. Five questions each from Units I and III

Section –B

- 1. 5 questions carrying 12 marks each (one compulsory question from non-detailed text)
- 2. Each question will have two or three sub questions covering all the units

Text Books

- 1. Effective Technical Communication by Barun K Mitra, Oxford University Publication Non-detailed Text
- 2. Karmayogi: A Biography of E Sreedharan by M S Ashokan

Reference Books

- 1. Communication Skills by Sanjay Kumar & PushpaLatha, OUP
- 2. Study Writing by Liz Hamp-Lyons and Ben Heasly, Cambridge University Press.
- 3. Remedial English Grammar by F T Wood, Macmillian 2007
- 4. Practical English Usage by Michael SwanOxford University Press
- 5. English Collocations in Use by Michael McCarthy & Felicity O'Dell
- 6. Effective Technical Communication by Arsahf Rizvi,
- 7. Essential English Grammar by Raymond Murphy, CUP, 2017

COURSE OUTCOMES:

On completion of the course student will be

- 1. Able to rationalise periodic properties like ionization potential, electro negativity and oxidation states.
- 2. Able to know the nature and working of various electrodes.
- 3. Able to analyze bulk properties and processes using thermodynamic considerations.
- 4. Able to synthesize organic molecules using different types of chemical reactions.
- 5. Able to understand the concepts of atomic and molecular orbitals.
- 6. Able to gain knowledge on spectroscopic techniques and the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.

QUESTION PAPER PATTERN:

SECTION A:

- 1. This section contains ten one answer questions carrying 1 mark each.
- 2. Two questions from each unit should present.

SECTION B:

- 1. This section will have 5 questions with internal choice.
- 2. Each full question carries 12 marks.
- 3. Each full question will have sub question covering all topics under a unit.

TEXT BOOKS:

- 1. Stereochemistry of Carbon Compounds by Ernest Eliel; McGraw Hill Education.
- 2. Fundamentals of Molecular Spectroscopy, by C. N. Banwell.
- 3. Concise Inorganic Chemistry, J.D.Lee, 5th Edition; Wiley India.
- 4. Engineering Chemistry Fundamentals and applications by Shikha Agarwal; Cambridge University Press
- 5. Organic Chemistry: Structure and Function by K. P. C. Volhardt and N. E. Schore, 5th Edition <u>http://bcs.whfreeman.com/vollhardtschore5e/default.asp</u>
- 6. Engineering Chemistry by Jain & Jain; Dhanpat Rai Publishing Company

REFERENCE BOOKS:

- 1. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S.Krishnan.
- 2. Physical Chemistry, by P. W. Atkins.
- 3. Physical Chemistry, by Glasstone, S
- 4. Advanced inorganic chemistry by Wilkinson G and Cotton FA

| Subject Code | 18CMMAT2010 | Internal Marks | 30 |
| Number of Lecture Hours/Week | 3(L)+1(T) | External Marks | 70 |
| Total Number of Lecture Hours | 50 | External Warks | 03 |
| Credits – 0 | | | 03 |
| Course objectives: | 4 | | |
| To enable students to apply the knowledge of learn the following To solve system of linear equations To find eigen values and eigen vectors of a To solve initial value problems by using La To find the solution of algebraic/ transcend To evaluate numerical integration and to so methods. To find Fourier series of a periodic function Unit -1 Linear Algebra: Rank of a matrix by elemetee equations - Gauss-elimination method, Gauss | matrix aplace transforms ental equations and also interp olve ordinary differential equat n and to determine the Fourier entary transformations, solution | olate the functions. ions by using numerica transform of a function on of system of linear | ı |
| method – Eigen values and Eigen vectors, Protransformation, Diagonalisation of a square markeduction of Quadratic form to Canonical form | operties of Eigen values and I atrix. Cayley-Hamilton theorem | Eigen vectors - Linear | Hours |
| Unit -2 | | | |
| Laplace Transforms: Laplace transforms of s of derivatives and integrals – Unit step function Inverse Laplace transforms– Convolution theo Applications: Solving ordinary differential equ transforms Unit – 3 | n –Dirac's delta function orem (without proof). | | 10 Hours |
| Numerical Methods: Numerical solution of Falsi Method and Newton-Raphson method. Finite differences: Error functions – Forwa forward and backward interpolation formula formulae - Lagrange's interpolation formula (a Unit – 4 | ard, backward and central c lae. Gauss`s forward and ba | lifferences, Newton's | 10 Hours |
| Numerical integration : Trapezoidal rule - solutions of ordinary differential equations-Ta method-Modified Eulers method-Runge-Kutta | ylors series method-Picard's r | | 8 Hours |
| Unit – 5 Fourier Series : Periodic functions, Dirichle with period 2π and with arbitrary period. Fo Fourier Series. Fourier Transforms : Infinite Fourier transfor Fourier transforms. | urier series of even and odd | functions, Half range | 12 Hours |
| Course outcomes: On completion of this course, students are able 1. Solve system of linear equations 2. Find eigen values and eigen vectors of a r 3. Solve initial value problems by using Lap 4. Find the solution of algebraic/ transcender 5. Evaluate numerical integration and to solv 6. Find Fourier series of a periodic function Question paper pattern: Text Books: 1. B. S. Grewal," Higher Engineering Mather 2. | COURSE OBJECTIVES: | | | | |
| The objectives of this course, help the | e students | | | |
| • To impart the knowledge of Ne | ewton's law of motion in central force field | ld | | |
| • To understand the Motion of ri | gid body systems in a Non inertial frames | s of reference | | |
| To describe the Rigid body dyr | namics | | | |
| Unit -1 | | | | |
| One Dimensional motion | | | | |
| Newton's law, Equation of motion in | one dimension, Invariance of Newton's | equations-under | | |
| | coordinate system, time translation, Time | | Hoı | ırs – 10 |
| | ccelerating frames of reference. Simple h | | | |
| | nic motion – over-damped, critically dar | nped and lightly- | | |
| damped oscillators; Forced oscillation | as and resonance. | | | |
| Unit -2 | | | | |
| Two dimensional motion | | 1 1 . | | 0 |
| | esian coordinate system and in the radial | | Ho | urs – 9 |
| | em of planetary motion and its solutions, | Classification of | | |
| Kepler's orbits. | | | | |
| Unit -3 Three dimensional motion | | | | |
| Three dimensional motion in the Cart | asian acordinate system. Example of | | | |
| | non referential plane- Accelerating refer | ence plane along | Hot | ırs – 10 |
| | ting with a constant angular velocity, Ea | | 1100 | 115 - 10 |
| | tations-Apparent gravitational acceleration | | | |
| Coriolis force on terrestrial experimer | | | | |
| Unit – 4 | | | | |
| Conservative and non conservative | force fields: | | | |
| Conservative and non conservative fo | rce fields, Gradient of a potential field, C | url of a vector | Па | |
| field, Newton equations for variable n | nass system (rocket), System of particles | and centre of | HO | urs – 9 |
| mass. | | | | |
| Unit – 5 | | | | |
| Rigid body dynamics | | | | |
| | ticle and system of particle, Definition | | Ho | urs –10 |
| | Euler's equation describing rigid body | . 0 | 1100 | and 10 |
| | and moment of inertia, Parallel axis theo | orem. | | |
| COURSE OUTCOMES: | | | | |
| On completion of the course student v | | | | |
| | r invariance and non invariance of Newto | on's second law. | | |
| 2. Distinguish the various harm | | | | |
| 3. Apply Kepler's laws to under | | | | |
| | ation formula with consideration of earth | | | |
| | f conservative and non conservative force | e fields. | | |
| 6. Describe the rigid body dyna | unics and moment of inertia. | | | |

| Number of Lecture Hours/Week | 3 | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| Credits - 03 | | | 1 |
| Unit-I: Introduction to computer systems an | nd programming | | Teaching Hours |
| History & Hardware: Computer Hardware, c Introduction to Problem solving: Algorithm, algorithms, Pseudocode, Flowchart, Types of I and Output. Basics of C: History and Features of C, Import Interpreter, Structure of C Program, Program detection | , characteristics of Algorithms, E anguages, Relation between Dat tance of C, Procedural Language levelopment steps, programming | Basic operations of ca, Information, Input e, Compiler versus | Hours - 08 |
| Unit-II: C Expressions, evaluation and cont | | | T |
| Overview of C: Character Set, C-Tokens, Da precedence and Associativity, converting math C-expressions, Input/output functions. Conditional Branching: if statement, ifelse ladder, switch statement. Unconditional Branching: goto. Control flow statements: break, continue. Looping Constructs: do-while statement, whi | nematical expressions to C-expressions to C-expressions to C-expressions to C-expressions to C-expression statement, Nested ifelse statemen | essions, evaluation of | Hours- 12 |
| Unit-III: Arrays and Functions | , | | |
| Arrays: Introduction, 1-D Arrays, Character a Multi-Dimensional Arrays. Functions: Basics, necessity and advantages, Recursion, Storage Classes, Command Line A and vice-versa. Strings: Working with strings, String Handling | Types of functions, Parameter J Arguments, Conversion from R g Functions (both library and use | passing mechanisms, ecursion to Iteration | Hours- 10 |
| Unit-IV: Derived and User Defined Data typ | pes | | |
| Pointers: Understanding Pointers, Pointer exponents to Functions. Dynamic Memory Allocation: Introduction realloc, free. Structures and Unions: Defining a Structure Arrays of Structures, Structures and Arrays, Defining Unions, Union within union, Structure referential structures, bitfields, enumerations. | n to Dynamic Memory Alloca , typedef, Advantage of Structur Structures and Functions, Stru | tion malloc, calloc, re, Nested structures, actures and Pointers, | Hours- 12 |
| Unit-V: Preprocessing and File Handling | | | |
| Preprocessing Directives : Macro Substitution directives File Management in C: Introduction to File M of files, Error Handling During I/O Operations | Aanagement, Modes and Operati | - | Hours- 08 |
| Text Books: 1. Computer Programing ANSI C, E Balag 2. Programming in C, Reema Thareja, Sec Reference Books: 1. Computer Basics and C Programming, V | ond Edition, Oxford Higher Edu | acation (TB2) | (TB1) |

Course Outcomes:

Student can able to

- 1) Formulate algorithms, translate them into programs and correct program errors.
- 2) Choose right control structures suitable for the problem to be solved.
- 3) Decompose reusable code in a program into functions.
- 4) Make use of arrays, pointers, structures and unions effectively.
- 5) Store and retrieve data from permanent storage.
- 6) Learn file operations

Question paper pattern:

| ENC | GINEERING PHYSICS LABORATO Common to CE&ME SEMESTER - II | RY | |
|---|--|-------------------------|------------|
| Subject Code | 18CEPHL2050, 18MEPHL2050 | Internal Marks | 50 |
| Number of Practice Hours/Week | 03 | External Marks | 50 |
| Total Number of Practice Hours | 36 | Exam Hours | 03 |
| Cred | lits – 1.5 | | |
| COURSE OBJECTIVES: | | | |
| The objectives of this course, help t | he students | | |
| • To apply the theoretical know | wledge of Physics through hands on the e | experimental instrument | ts |
| | knowledge in the later studies | | |
| • To understand the basic need | | | |
| • To know how to measure the | different physical quantities. | | |
| | List of Experiments | | |
| 1. To investigate the Motion of | - | | |
| 2. To determine the rigidity mo | dulus η of wire-Torsional pendulum. | | |
| | te to gravity g and radius of gyration K - | | |
| | of an electrically maintained tuning fork | by Melde's Experimen | ıt. |
| | sound in air-Volume resonator. | | |
| 6. To verify the transverse law | | ·c 1 1: | |
| To determine the young's mo To determine the Moment of | odulus and draw load depression graph in | n uniform bending. | |
| | d perpendicular axis theorems and deter | mine the moment of ine | ortia of a |
| regular rectangular body -Bit | | mile the moment of me | ana or a |
| 10. To study of oscillations Spira | | | |
| COURSE OUTCOMES: | | | |
| On completion of the course studen | t will able to | | |
| 1. Study the mode of vibrations | | | |
| - | using the knowledge in simple harmonic | motions. | |
| 3. Apply the phenomenon of rea | sonance to verify the transverse laws of | stretched string. | |
| | vibrating body, velocity of sound in air u | | |
| 5. Determine the moment of ine | | | |
| 6. Verify the parallel axis and p | erpendicular theorems of moment of ine | rtia. | |

PROGRAMMING FOR PROBLEM SOLVING LAB SEMESTER - II Subject Code 18CMCSL2060 Internal Marks 50 Number of Practice Hours/Week External Marks 50 04 **Total Number of Practice Hours** 36 Exam Hours 03 Credits - 02 **Objectives:** To apply programming for basic mathematical functions • To design and program mathematical concepts. • To create and use the functions and library functions • Able to apply the theoretical knowledge of formatting of documents To create and apply user defined types to the real world problems. To create files and shapes of the concepts. List of Experiments Exercise 1 (Familiarization with programming environment) Familiarization of CODE BLOCKS C++ Editor to edit, compile, execute, test and debugging C a) programs. Familiarization of RAPTOR Tool to draw flow charts and understand flow of control. b) c) Acquittance with basic LINUX commands. Exercise 2 (Simple computational problems using arithmetic expressions) Write a C Program to display real number with 2 decimal places. a) b) Write a C Program to convert Celsius to Fahrenheit and vice versa. Write a C Program to calculate the area of triangle using the formula c) area = $\sqrt{s(s-a)(s-b)(s-c)}$ where s = a+b+cWrite a C program to find the largest of three numbers using ternary operator. d) Write a C Program to swap two numbers without using a temporary variable. e) Exercise 3 (Problems involving if-then-else structures) Write a C Program to check whether a given number is even or odd using bitwise operator, shift operator a) and arithmetic operator. Write a C program to find the roots of a quadratic equation. b) Write a C Program to display grade based on 6 subject marks using if...else...if ladder. c) Write a C program, which takes two integer operands and one operator form the user, performs the d) operation and then prints the result using switch control statement. (Consider the operators +, -, *, /, %) e) **Exercise 4 (Iterative problems)** Write a C Program to count number of 0's and 1's in a binary representation of a given number. a) Write a C program to generate all the prime numbers between two numbers supplied by the user. b) Write a C Program to print the multiplication table corresponding to number supplied asinput. c) **Exercise 5 (Iterative problems)** Write a C Program to Find Whether the Given Number is a) i) Armstrong Number ii) Palindrome Number b) Write a C Program to print sum of digits of a given number **Exercise 6 (Series examples)** a) Write a C Program to calculate sum of following series b) 1+2+3+... N b)1+1/2+1/3+...+1/n c) $1+x+x^2+x^3...+x^n$ Exercise 7 (1D Array manipulation) a) Write a C program to interchange the largest and smallest numbers in the array. b) Write a C program to search an element in an array (linear search). c) Write a C Program to print the following pattern using a character array S SA SAS SASI **Exercise 8 (Matrix problems, String operations)** Write a C program to add two matrices. a)

b) Write a C program to multiply two matrices if they are compatible or print an error message "incompatible matrix sizes" otherwise.

- c) Write a C program to check given matrix is symmetric or not.
- d) Implement the following string operations with and without library functions.
- i) copy ii) concatenate iii) length iv) compare

Exercise 9 (Simple functions)

- a) Write a C Program demonstrating the following function types
 - i. With arguments and with return value.
 - ii. With arguments and without return value
 - iii. Without arguments and without return value.
 - iv. Without arguments and with return value.
- b) Write a C Program illustrating call by reference

Exercise 10 (Recursive functions)

Write a C Program illustrating the following with Recursion without Recursion

a) Factorial b) GCD c) Power d) Fibonacci

Exercise 11(Pointers and structures)

- a) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using malloc () function.
- b) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using calloc () function. *Note: Understand the difference between the above two programs.*
- c) Write a C Program to read and print student details using structures.

Exercise 12 (File operations)

- a) Write a C program to open a file and to print it contents on screen.
- b) Write a C program to copy files
- c) Write a C program merges two files onto a new file.
- d) Write a C program to delete a file.

COURSE OUTCOMES:

- 1. Attain knowledge on using CODE BLOCKS and RAPTOR tools in solving problems.
- 2. Examine and analyze alternative solutions to a problem.
- 3. Design an algorithmic solution to a problem using problem decomposition and step-wise refinement.
- 4. Demonstrate conversion of iterative functions to recursive and vice-versa.
- 5. Implement the concepts of arrays.
- 6. Implement the structures, Unions and files.

| Subject Code 18CMMEL2070 Internal Marks Number of Practice Hours/Week 03 External Marks 36 Exam Hours Credits – 1.5 Credits – 1.5 COURSE OBJECTIVES: 1. Students should be able to learn the basic manufacturing processes, study the various tools and equipment used and gain hands-on experience in different trades. 2. Students should be able to learn the engineering and technology involved in carpentry, fitting, blas smithy, foundry, welding, machining and plastic moulding. 3. Students should be able to learn the engineering and technology involved in carpentry, fitting, blas smithy, foundry, welding, machining and plastic moulding. 3. Students should be able to learn the engineering and technology involved in carpentry, fitting, blas smithy, foundry, welding, machining and plastic moulding. 3. Students should be able to learn the engineering and technology involved in carpentry, fitting, blas smithy, foundry, welding, machining and plastic moulding. 3. Students should be able to learn the engineering and technology involved in carpentry, fitting beratical & Electronics (1 lecture) 3. Foundry (1 lecture) 4. Electronics (1 lecture) 5. COURSE OUTCOMES:

- Students will be able to make use of basic carpentry joints to make furniture.
 Students will be able to fabricate mechanical engineering assemblies using fitting joints.
- 3. Students will be able to produce various machine components by using foundry, black smithy, machining and plastic moulding techniques.

Brayton and - combined cycles, Bell- Coleman | 10 |

Course Outcomes:

On completion of the course, student will be able to

- 1. Identify type of thermodynamic systems in the energy perspective.
- 2. Solve the practical thermodynamic problems by applying first law and steady flow energy equation
- 3. Analyze the problems on heat engines, refrigeration and entropy by applying direction of law
- 4. Illustrate the concept of entropy by using second law of thermodynamics.
- 5. Calculate the thermodynamic properties of the
- 6. Evaluate the performance of air standard cycles and vapor power cycle and analyze the properties of gas mixtures.

Question paper pattern:

Section A:

- 1. This section contains ten one or two line answer question carrying 1 mark each.
- 2. Two questions from each unit should present.

Section B:

- 1. This Section will have 10 questions, 2 from each unit
- 2. Each full question carry 12 marks.
- 3. Each full question will have sub question covering all topics under a unit.
- 4. The student will have to answer 5 full questions selecting one full question from each unit

| MANUFA | ACTURING PROCESSES LA SEMESTER III | ABORATORY | |
|---|---------------------------------------|------------------------|----|
| Subject Code | 18MEMEL3070 | Internal Marks | 50 |
| Number of Lecture Hours/Week | 03 | External Marks | 50 |
| Total Number of Lecture Hours | 48 | Exam Hours | 03 |
| Credits – | 1.5 | | |
| Course objectives: This course will enable students to: | | | |
| • Determine the concepts of n | nanufacturing process. | | |
| Impart the design and manufacture | acture of patterns for mould patterns | reparation. | |
| • Make familiars with the diff | erent welding parameters and o | other joining process. | |

- Understand the practical concepts of TIG welding.
- impart hands-on practical exposure on metal forming processes.
- Compare the difference between injection and blow moulding.

I. METAL CASTING:

- 1. Preparation of a Sand mould using gear wheel pattern.
- 2. Preparation of a wax mould using.Split Piece Pattern
- 3. Preparation of a Stepped pulley pattern using wooden material.
- 4. Determination of Sand properties on Universal Strength Machine

II. WELDING PRACTICE:

- 1. Preparation of a Square Butt joint using arc welding.
- 2. Preparation of a Vertical joint using arc welding.
- 3. Preparation of a T-lap joint using Spot Welding.
- 4. Preparation of a Square Butt joint using TIG welding.
- 5. Joining of wires on circuit board using Soldering process.
- 6. Preparation of a lap joint using Oxy-acetylene gas welding process.

III. METAL FORMING:

- 1. Preparation of a washer using blanking & Piercing operations.
- 2. Preparation of Square tray.

IV. PROCESSING OF PLASTICS:

- 1. Preparation of a bottle cap using injection moulding.
- 2. Preparation of a bottle using blow moulding.

Course outcomes:

On completion of the course, student will be able to

- 1. Gain the knowledge of manufacturing process.
- 2. Know the design and manufacture of patterns for mould preparation.
- 3. Operate arc welding, gas welding and resistance welding equipment
- 4. Apply the practical concepts of TIG welding.
- 5. Acquire fundamental knowledge on metal forming processes.
- 6. Identify the difference between injection and blow moulding.

| Total Number of Lecture Hours | 50 | External Warks Exam Hours | 03 |
| Total Number of Lecture Hours | Credits - 03 | Examinours | 05 |
| Course Objectives: This course will enable students to: Understand the fundamental prop Apply the differential conservatio Evaluate major and minor losses Solve problems on the turbo mach Classify the different types of turk Discuss the Classification and wo | on equations of mass, momentuin pipes and also discuss bound ninery using analytical method pines & evaluate work done an | Im, and energy to fluid flow pr dary layer concept. and velocity triangles. d efficiency. | |
| hydraulic machines. | | | |
| Unit -1 | | | Hours |
| Fluids: Definition of fluid, Fluid propertie of pressure. Manometers- Piezometer, U-tube hydrostatic law. Buoyancy, forces on subm | e, inverted and differential mar | nometers. Pascal's law, | 8 |
| Unit -2 | | | 1 |
| Fluid Kinematics: Introduction, flow type line, path line and streak lines and stream to Fluid Dynamics: surface and body forces line, momentum equation and its application | tube. Stream function and velo –Euler's and Bernoulli's equa | city potential function. | 10 |
| Unit – 3 | | | - |
| Closed Conduit Flow: Reynold's experim pipes in series and pipes in parallel- total e Boundary Layer Theory: Introduction, n energy thickness, separation of boundary 1 Unit – 4 | energy line hydraulic gradient l nomentum integral equation, d | ine. | 8 |
| Basics of Turbo Machinery: hydrodynar | nic force of jets on stationary | and moving flat inclined and | |
| curved vanes, jet striking centrally and at radial vanes. Hydraulic Turbines: classification of tu and Kaplan turbines. Importance of Draft | tip, velocity diagrams, work d rbines, Working and efficience | one and efficiency, flow over | 12 |
| Unit-5 | | | - - |
| Hydraulic Quantities: Unit and specific of selection of type of turbine, cavitation, sur Centrifugal Pumps: Classification, worki specific speed- pumps in series and paralle Reciprocating Pumps: Working, Dischar | ge tank, water hammer. ing, work done – manometric l el performance characteristic c | nead losses and efficiencies- | 12 |
| Course outcomes: Students will be able to Remember the various properties Understand the kinematics and dy Estimate the losses in pipes and u Solve problems on the turbo mach Analyze the performance of hydra Analyze the working of hydraulic Question paper pattern: | of fluids and pressure measure ynamics of fluids in detail. Inderstand the concept of Bour ninery using analytical method aulic turbines, unit and specific | ndary layer theory and velocity triangles. c quantities | |
| Section A: | | | |
| 1. This section contains ten one or t | | ng 1 mark each. | |
| Two questions from each unit sho Section B: This Section will have 10 question Each full question carry 12 marks Each full question will have sub compared | ns, 2 from each unit | der a unit. | |

4. The student will have to answer 5 full questions selecting one full question from each unit

| 6. Estimate the performance of hyd | raune pumps | | |

| MECHANICS OF SOLIDS & MATERIALS LAB SEMESTER IV | | | | | |
|--|----|----------------|----|--|--|
| Subject Code18MEMEL4070Internal Marks50 | | | | | |
| Number of Lecture Hours/Week | 03 | External Marks | 50 | | |
| Total Number of Lecture Hours48Exam Hours03 | | | | | |
| Credits – 15 | | | | | |

Course objectives:

This course will enable students to:

- Understand the mechanical properties of various materials.
- Identify the failures of brittle and ductile materials
- Find the deflection of different types of beams
- Determine modulus of rigidity of a specimen by torsion test
- Suggest a suitable ferrous and non-ferrous metal and their alloys for a given application
- Illustrate the property requirements of a given application and suggest appropriate heat treatment
- Relate the hardenability of steels by jominy end quench test with jominy distances

List of Experiments

Part-A

- 1. Direct Tension test
- 2. Young's Modulus of metal specimen by direct Tension test
- 3. Brinnel's and Rock well hardness test
- 4. Compression test
- 5. Impact test
- 6. Test on helical Spring to determine the rigidity modulus
- 7. Torsion Test to determine the rigidity modulus of a shaft
- 8. Deflection test on a simple or cantilever beam to determine the Young's modulus

Part-B

- 1. Preparation and study of the Micro Structure of pure metals like Iron, Cu and Al.
- 2. Preparation and study of the Microstructure of mild steels, low carbon steels, high C steels.
- 3. Study of the micro structures of cast Irons.
- 4. Study of the micro structures of non-ferrous alloys.
- 5. Study of the micro structures of heat treated steels.
- 6. Hardeneability of steels by Jominy end quench test.
- 7. To find out the hardness of various treated and untreated steels.

Course Outcomes:

- 1. Compute the strength of members of various materials under different loads such as compressive, tensile, flexural and torsional.
- 2. Compute the elastic property of the beam material by measuring deflection
- 3. Determine the hardness of different types of materials
- 4. Measure the stiffness of a spring
- 5. Determine the modulus of rigidity of a shaft
- 6. Identify a suitable ferrous and non- ferrous metal and their alloys for a given application
- 7. Suggest appropriate heat treatment for a given application
- 8. Relate the hardenability of steels by jominy end quench test with jominy Distances

| COURSE OBJECTIVES: | 0 | | |
| This course will enable students to: | | | |
| Study the conventions and rules | to be followed by engineers for | r making accurate drawing | rs |
| Understand and apply national ar | | | |
| • Acquire knowledge of fastening | | | |
| • Familiarize in drawing assembly | • | ews of various joints. | |
| • Familiarize in drawing assembly | | | |
| Unit -1 | | | Hours |
| Drawing of Machine Elements and sim | ple parts | | |
| Selection of views, additional views for the | | and parts. | |
| a) Popular forms of screw threads, bolts, n | nuts and foundation bolts | | |
| b) Keys, cotter joints and knuckle joint. | | | 10 |
| c) Riveted joints for plates | | | |
| d) Shaft coupling, spigot and socket pipee) Journal, pivot and collar and foot step I | | | |
| Unit -2 | bearings. | | |
| Assembly Drawing - I | | | |
| Drawings of assembled views for the part | drawings of the following usig | ng conventions | |
| a) Engine parts – petrol engine connecting | | ig conventions. | 10 |
| b) Machine parts - screws jack, machine v | | | |
| Unit – 3 | | | I |
| Assembly Drawing - II | | | |
| Drawings of assembled views for the part | drawings of the following usin | ng conventions. | 10 |
| a) Machine parts - Plummer block, Tailsto | | | 10 |
| b) Valves: spring loaded safety valve, air c | eock | | |
| Unit – 4 | | | |
| Part Drawing - I | | | 10 |
| Drawings of part views of the following u Socket and spigot joint, knuckle joint, Ol | | | 10 |
| Unit – 5 | main coupling. | | |
| Part Drawing - II | | | |
| Drawings of part views of the following u | using conventions | | 10 |
| Protected flanged coupling, Bushed-pin ty | | coupling. | 10 |
| COURSE OUTCOMES: | | 1 0 | 1 |
| On completion of the course, student will | | | |
| 1. Identify the national and internat | | achine drawing. | |
| 2. Illustrate various machine compo | | | |
| 3. Construct an assembly drawing of | | udina datail duaminaa hill | of |
| Interpret a set of working drawin materials, part specifications | igs of a machine assembly men | uding detail drawings, bill | 01 |
| 5. Analyze the part or assembly dra | wings as per the conventions. | | |
| 6. Understanding the importance of | | alization aspects in the pr | reparation |
| of the part drawings | | | • |
| Question paper pattern : | | | |
| Section A: | | | |
| 1. This section contains three quest | | | |
| 2. Answer any Two questions in Se Section B: | cuon-A 10x2 = 20 marks. | | |
| 1. Question from Section-B is comp | ulsory - $50x1 = 50$ marks | | |
| 2. Question nom beedon b is comp | story control marks | | |

| Unit - 3 Ferrous & non-ferrous metals and th malleable cast iron, grey cast iron, spher steels, structure and properties of plain ca tool and die steels. Structure and proper Titanium and its alloys Unit – 4 | oid graphite cast iron, allourbon steels, low alloy stee | by cast irons. Classification o ls, Hadfield manganese steels | f , 12 |
| Heat treatment of Alloys: Annealing hardenability, surface-hardening method hardening and flame hardening), age ha vacuum and plasma hardening Unit-5 | ds (carburizing, carbo-ni | triding, cyaniding, induction | n e |
| Ceramic and composite materials: Cry | vetalline ceramics alassos | cermete abrasiva materiale | |
| nanomaterial's – definition, properties and various methods of component manufact reinforced materials, metal ceramic mixtur | d applications of the above ure of composites, particle | e. Classification of composites e – reinforced materials, fibe | , |
| suitable ceramics, composite mat | s and understand crystalliza ds. dy of binary phase diagran ments of a given applicati tts of a given application ar quirements of a giver terials | ns on and suggest suitable ferro nd suggest appropriate heat tre | us & non atment ggest a |

engineering materials

Question paper pattern:

- 1. Question paper contains 10 Questions, 2 from each course outcome. The student must answer 5 full questions by selecting one question from each course outcome (Internal Choice)
- 2. All questions carries 14 marks each
- 3. Each full question will have sub question covering all topics under a course outcome

Text Books:

- 1. Introduction to Physical Metallurgy Sidney H. Avener McGrawHill
- 2. Essential of Materials science and engineering Donald R.Askeland Thomson

Reference Books:

- 1. Material Science and Metallurgy V.D.Kodgire and S.V.Kodgire
- 2. Materials Science and engineering Callister & Baalasubrahmanyam
- 3. Material Science for Engineering students Fischer Elsevier Publishers.
- 4. Material science and Engineering V. Rahghavan
- 5. Introduction to Material Science and Engineering Yip-Wah Chung CRC Press.
- 6. Material Science and Metallurgy A V K Suryanarayana B S Publications.
- 7. Material Science and Metallurgy U. C. Jindal Pearson Publication

|--|---------------------------------------|-----------------|----|
| Subject Code | 18MEMEL3070 | Internal Marks | 50 |
| Number of Lecture Hours/Week | 03 | External Marks | 50 |
| Total Number of Lecture Hours | 48 | Exam Hours | 03 |
| · · · · · · | Credits – 1.5 | | · |
| Course objectives: | | | |
| This course will enable students to: | | | |
| 1. Determine the concepts of manufac | | | |
| 2. Impart the design and manufacture | | | |
| 3. Make familiars with the different v | | oining process. | |
| 4. Understand the practical concepts of | | | |
| 5. impart hands-on practical exposure | | | |
| 6. Compare the difference between in | jection and blow moulding. | | |
| I. METAL CASTING: | · · · · · · · · · · · · · · · · · · · | | |
| 1. Preparation of a Sand mould u | | | |
| 2. Preparation of a wax mould us | | : a1 | |
| Preparation of a Stepped pulle Determination of Sand property | | | |
| II. WELDING PRACTICE: | les on Oniversal Stiength Ma | chine | |
| 1. Preparation of a Square Butt jo | oint using arc welding | | |
| 2. Preparation of a Vertical joint | | | |
| 3. Preparation of a T-lap joint us | | | |
| 4. Preparation of a Square Butt jo | | | |
| 5. Joining of wires on circuit boa | | | |
| 6. Preparation of a lap joint using | | process. | |
| III. METAL FORMING: | | | |
| 1. Preparation of a washer using | blanking & Piercing operation | 18. | |
| 2. Preparation of Square tray. | | | |
| IV. PROCESSING OF PLASTICS: | | | |
| 1. Preparation of a bottle cap usin | ng injection moulding. | | |
| 2. Preparation of a bottle using b | low moulding. | | |
| Course outcomes: | | | |
| On completion of the course, student w | | | |
| 1. Gain the knowledge of manuf | | | |
| 2. Know the design and manufa | | | |
| 3. Operate arc welding, gas weld | | quipment | |
| 4. Apply the practical concepts of | | | |
| 5. Acquire fundamental knowled | | | |
| 6. Identify the difference betwee | en injection and blow moulding | ıg. | |

| Subject Code | 18MEMET4020 | Internal Marks | 30 |
| Number of Lecture Hours/Week | 03 | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| Total Number of Lecture Hours | Credits - 03 | Exam Hours | 05 |
| Course Objectives: This course will enable students to: 1. Understand the fundamental properties 2. Apply the differential conservation equiting 3. Evaluate major and minor losses in pip 4. Solve problems on the turbo machinery 5. Classify the different types of turbines 6. Discuss the Classification and workin machines. | ations of mass, momentum, an es and also discuss boundary la vusing analytical method and v & evaluate work done and efficient | d energy to fluid flow problems ayer concept. relocity triangles. ciency. | |
| Unit -1 | | | Hours |
| Fluids: Definition of fluid, Fluid properties pressure. Manometers- Piezometer, U-tu hydrostatic law. Buoyancy, forces on submo | be, inverted and differentia | l manometers. Pascal's law, | 8 |
| Unit -2 | - Emotion of south it f | and dimensional file for | |
| Fluid Kinematics: Introduction, flow type line, path line and streak lines and stream tu Fluid Dynamics: surface and body forces line, momentum equation and its application | be. Stream function and velocities -Euler's and Bernoulli's equation: | ty potential function. | 10 |
| Unit – 3 | | | |
| Closed Conduit Flow: Reynold's experim in series and pipes in parallel- total energy l Boundary Layer Theory: Introduction, r energy thickness, separation of boundary la | ine hydraulic gradient line. nomentum integral equation, | | 8 |
| Unit – 4 | | | |
| Basics of Turbo Machinery: hydrodynam curved vanes, jet striking centrally and at radial vanes. Hydraulic Turbines: classification of turb Kaplan turbines. Importance of Draft Tube. Unit-5 | tip, velocity diagrams, work connections, Working and efficiencies | lone and efficiency, flow over | 12 |
| Hydraulic Quantities: Unit and specific | c quantities, characteristic cu | irves, governing of turbines, | |
| selection of type of turbine, cavitation, surg Centrifugal Pumps: Classification, worki specific speed- pumps in series and parallel Reciprocating Pumps: Working, Discharg | e tank, water hammer. ing, work done – manometric performance characteristic cur | head losses and efficiencies- | 12 |
| Course outcomes: Students will be able to: | : | | |
| Remember the various properties of Understand the kinematics and dyn Estimate the losses in pipes and un Solve problems on the turbo machina Analyze the performance of hydraulic Analyze the working of hydraulic | namics of fluids in detail. Iderstand the concept of Bound inery using analytical method a ulic turbines, unit and specific | ary layer theory and velocity triangles. quantities | |
| Question paper pattern: 1. Question paper contains 10 Question questions by selecting one question 2. All questions carries 14 marks each 3. Each full question will have sub question | n from each course outcome (In h | nternal Choice) | ull |
| Text Books:1.Hydraulics and fluid mechanics i Rajsons publications private Ltd.2.A Text Book of Fluid Mechanics b 3.3.Fluid Mechanics and Hydraulic Mechanics | ncluding hydraulic machines by R.K. Rajput, S. Chand publi | by Dr. P.N. Modi & Dr. S.M shers | . Seth, |

| | THEORY OF MACHINES – SEMESTER IV | Ι | |
|--|---|---|------------------------|
| Subject Code | 18MEMET4030 | Internal Marks | 30 |
| Number of Lecture Hours/Week | 03 | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| | Credits – 03 | | |
| Acquire knowledge on straight I Calculate the velocity and acceled Understand types of cam mecha Draw the cam profile for different motions. Learn basic concepts of gears are Unit -1 Mechanisms: Elements or Links - C kinematic pairs – sliding, turning, reference | rent follower motions and to design ad gear trains Classification – Rigid Link, flexible olling, screw and spherical pairs – | lower pairs. anism gn cam mechanisms for spe and fluid link – Types of lower and higher pairs – | cified output Hours |
| closed and open pairs – constrained and incompletely constrained . Gr Kutzbach criterion for planar me machines – kinematic chain – invers quadric cycle, chain – single and dou | rublers criterion, Grashoff's law chanisms, Mechanism and mach ion of mechanism – inversion of n | , Degrees of freedom, nines – classification of | 10 |
| Unit -2 Lower Pair Mechanism : Exact at Hart and Scott Russel – Grasshoppe line motion, Pantograph. Condition steering gear – velocity ratio; Ha application–problems. –Mechanical Unit – 3 | r – Watt T. Chebicheff and Robert as for correct steering – Davis S ooke's Joint: Single and double | Mechanisms and straight teering gear, Ackermans - Universal coupling- | 09 |
| Plane Motion of Body: Instantane locating instantaneous centres, relat theorem – Graphical determination and determination of velocity of poin Kinematics : Velocity and accelerat Velocity and acceleration – Graphica mechanism. Velocity and accelerat determination of Coriolis component Unit – 4 | tive motion between two bodies of instantaneous centre, diagrams ints and angular velocity of links. ation – Motion of a link in mac al method – Application of relative ion analysis for a given mechanis | Three centres in line for simple mechanisms hine – Determination of velocity method four bar | 12 |
| Cams and Followers: Definitions of cams – Terminology –Types of follo uniform acceleration and retardation outward and return strokes in the follower – circular arc cam with strat Unit-5 | ower motion: Uniform velocity, Sin on. Maximum velocity and maxin above 3 cases. Analysis of mo | nple harmonic motion and num acceleration during | 09 |
| Gears: Introduction, Higher pairs, fr definitions –Gear tooth action – pa gearing – Involutes and cycloidal to minimum number of teeth to avoid Pinion gears [Basics only]. Gear trains –types, Speed ratio, tra Differentials Course outcomes: | th of contact, arc of contact ,cont ooth profiles — Interference and u interference – gear teeth – Helical | act ratio. Law of toothed ndercutting, condition for , Bevel, Worm, Rack and | 10 |
| On completion of the course, student 1. Explain the importance of k | t will be able to inematics, kinematic pairs and mee | chanisms | |

- 2. Describe the relative motion between the parts of a mechanism without considering the forces.
- 3. Summarize various mechanisms for straight line motion and steering gear, Hooke's joint with applications.
- 4. Analyse the velocity and acceleration concepts for four bar mechanism & slider crank mechanism using graphical method
- 5. Distinguish types of cam mechanisms and draw the cam profile for different follower motions
- 6. Calculate length of contact, arc of contact and minimum number of teeth to avoid interference. Also calculate speeds of different gears in a gear train.

Question paper pattern:

- 1. Question paper contains 10 Questions, 2 from each course outcome. The student must answer 5 full questions by selecting one question from each course outcome (Internal Choice)
- 2. All questions carries 14 marks each
- 3. Each full question will have sub question covering all topics under a course outcome

| MECHANICS OF SOLIDS & MATERIALS LAB SEMESTER IV | | | | | |
|--|----|----------------|----|--|--|
| Subject Code18MEMEL4070Internal Marks50 | | | | | |
| Number of Lecture Hours/Week | 03 | External Marks | 50 | | |
| Total Number of Lecture Hours48Exam Hours03 | | | | | |
| Credits – 1.5 | | | | | |

Course objectives:

This course will enable students to:

- 1. Understand the mechanical properties of various materials.
- 2. Identify the failures of brittle and ductile materials
- 3. Find the deflection of different types of beams
- 4. Determine modulus of rigidity of a specimen by torsion test
- 5. Suggest a suitable ferrous and non-ferrous metal and their alloys for a given application
- 6. Illustrate the property requirements of a given application and suggest appropriate heat treatment
- 7. Relate the hardenability of steels by jominy end quench test with jominy distances

List of Experiments

Part-A

- 1. Direct Tension test
- 2. Young's Modulus of metal specimen by direct Tension test
- 3. Brinnel's and Rock well hardness test
- 4. Compression test
- 5. Impact test
- 6. Test on helical Spring to determine the rigidity modulus
- 7. Torsion Test to determine the rigidity modulus of a shaft
- 8. Deflection test on a simple or cantilever beam to determine the Young's modulus

Part-B

- 1. Preparation and study of the Micro Structure of pure metals like Iron, Cu and Al.
- 2. Preparation and study of the Microstructure of mild steels, low carbon steels, high C steels.
- 3. Study of the micro structures of cast Irons.
- 4. Study of the micro structures of non-ferrous alloys.
- 5. Study of the micro structures of heat treated steels.
- 6. Hardenabality of steels by Jominy end quench test.
- 7. To find out the hardness of various treated and untreated steels.

Course Outcomes:

- 1. Compute the strength of members of various materials under different loads such as compressive, tensile, flexural and torsional.
- 2. Compute the elastic property of the beam material by measuring deflection
- 3. Determine the hardness of different types of materials
- 4. Measure the stiffness of a spring
- 5. Determine the modulus of rigidity of a shaft
- 6. Identify a suitable ferrous and non- ferrous metal and their alloys for a given application
- 7. Suggest appropriate heat treatment for a given application
- 8. Relate the hardenability of steels by jominy end quench test with jominy Distances

| | SEMESTER - V | | |
| Subject Code | 18MEMET5010 | Internal Marks | 30 |
| Number of Lecture Hours/Week | 3 | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| | Credits – 03 | | |
| Course Objectives: | | | |
| The course should enable the stud | dents to: | | |
| 1.Acquire the knowledge on theo | ory of metal cutting and mechar | hisms of machining | |
| 2.Understand about the various la | athe machines cutting processes | 5 | |
| 3.Understand about the various s | lotting, planning drilling & bor | ing cutting processes | |
| 4.Understand the features of Mindexing. | illing process, milling machine | es, Milling operations and differen | nt types o |
| 5.Understand the basics of Metro | logy like Surface roughness, su | urface finish, limits and tolerances e | etc. |
| Unit -1 | | | Hours |
| signature, chip formation and ty | pes of chips, chip breakers, r | of single point cutting tool, tool nechanics of orthogonal cutting – l, depth of cut, tool life, coolants, | |
| Jigs & Fixtures: Principles of applications. | design of jigs and fixtures, pr | inciples of location and clamping, | |
| Unit -2 | | | |
| construction of engine lathe, lat | he operations, work holders & pal features of automatic lathe | ification of lathe, types of lathes, tool holders – lathe attachments, es – classification – single spindle | 08 |
| Unit – 3 | | | _1 |
| Shaping, Slotting & Planning I specifications - operations perfor | - | iple of working – principle parts – | 10 |
| machines- specifications- types | of drills - geometry of twist of | rilling machines – types of drilling drill - operations performed – tool nes – fine Boring Machines – jig | |

| boring machines | |
|--|----------------------|
| Unit – 4 | |
| Milling Machines: Principles of working – specifications – classification of milling machines principal features of horizontal, vertical and universal milling machines, machining operation types of cutters and geometry of milling cutters, accessories to milling machines, introduction trindexing, classification, methods of indexing- simple & compound. Finishing Processes: Theory of grinding, classification of grinding machines, cylindrical ar surface grinding machines, tool and cutter grinding machines, different types of abrasives, bond and selection of a grinding wheel. | s, to 12 id |
| Unit – 5 | |
| Systems Of Limits and Fits: Introduction, nominal size, tolerance, limits, deviations, fits Unilateral and bilateral tolerance system, hole and shaft basis systems, and problems. Linear Measurements: Slip gauges, dial indicators, vernier caliper and micrometers. Angular Measurements: Bevel protractor, angle slip gauges, angle dekkor and sine bar | - 10 |
| Course outcomes: At the end of the course the student will be in a position to: | |
| 1. Analyze mechanics of orthogonal cutting to metal machining. | |
| 2. Acquire the knowledge on operations in conventional, automatic, Capstan & turret lathes. | |
| 3. Explain shaping, slotting, planning, drilling and boring machines. | |
| 4. Make gear and keyway in milling machines using indexing mechanisms and principles processes | of finishing |
| 5. Outline the linear and angular measuring instruments | |
| Text Books: | |
| 1. Production Technology by R.K. Jain and S.C. Gupta/ Hanna Publishers | |
| 2. Workshop Technology – B.S.Raghu Vamshi – Vol II/ Dhanpat Rai & Co | |
| 3. Manufacturing Technology Vol-II/P.N Rao/Tata McGraw Hill | |
| 4. Engineering Metrology / R.K.Jain / Khanna Publishers | |
| Reference Books: | |

| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| | Credits – 03 | | |
| | | | |
| Course Objectives: | | | |
| Enable the students to | | | |
| 1. Understand the modes of he | at transfer and their application | ns in different energy systems. | |
| 2. Gain the knowledge on effec | tiveness and efficiency of fins | for various heat transfer application | 18. |
| 3. Understand the concepts o heat transfer. | f continuity, momentum and e | energy principles of fluid flow p | roblems in |
| 4. Select appropriate correlation over exterior surfaces and flo | | coefficients for forced and natural | convection |
| | • • | e by using LMTD and NTU me urfaces and gray body surfaces | thods and |
| Unit -1 | | | Hours |
| Introduction: Modes and mechadiscussion about applications of h | | ic laws of heat transfer – General | |
| | | eral heat conduction equation in ready and periodic heat transfer – | |
| cylinder, sphere - Homogeneou | is slabs, hollow cylinders - | active heat transfer through slab, overall heat transfer coefficient– systems with heat sources or heat | |
| Unit -2 | | | |
| | in, fin with insulated tip a | ls, heat transfer from fins with nd short fin, Fin efficiency and e. | 10 |
| One Dimensional Transient Co and Fourier numbers- chart soluti | | acity systems– significance of Biot stems | |

Unit – 3

| Convection: Dimensional analysis– Buckingham Pi Theorem for forced and free convection – non-dimensional numbers and their significance – concepts of continuity, momentum and energy equations. | 10 |
|--|-----------|
| Forced Convection: Concepts about hydrodynamic and thermal boundary layers and their thicknesses – use of empirical correlations for convective heat transfer – flat plates, cylinders, horizontal pipe flow and annulus flow. | |
| Unit – 4 | |
| Natural Convection: Development of hydrodynamic and thermal boundary layer along a vertical plate – use of empirical relations for vertical plates and cylinders, horizontal plates and cylinders. | |
| Boiling: Pool boiling – regimes- calculations on nucleate boiling, critical heat flux and film boiling. | 10 |
| Condensation: Film wise and drop wise condensation –Nusselt's theory of condensation on a vertical plate – film condensation on vertical and horizontal cylinders using empirical correlations. | |
| Unit – 5 | |
| Heat Exchangers: Classification of heat exchangers, temperature distribution, – overall heat transfer coefficient, fouling factor –concepts of LMTD and NTU methods – Effectiveness of the heat exchanger. | 10 |
| Radiation Heat Transfer: Basic concepts and definitions: Absorptivity, Reflectivity, Transmissivity – concept of black body – Laws of radiation – heat transfer between two finite black surfaces and two grey surfaces – concept of shape factor – Emissivity — radiation shields. | |
| Course outcomes: | |
| After the completion of the course students will be able to | |
| 1. Formulate heat transfer conduction equations on engineering systems. | |
| 2. Analyze the conduction and convection heat transfer coefficients on fins which are used in applications. | real time |
| 3. Solve fluid flow problems using continuity, momentum and energy principles. | |
| 4. Evaluate heat transfer coefficients for forced convection and natural convection. | |
| 5. Determine heat exchanger performance and effectiveness by using the method of LMTD & I calculate the radiation heat transfer between black body & gray body surfaces. | NTU and |

| | Credits – 03 | | |
| | | | |
| Course Objectives: | | | |
| Enable the students to | | | |
| 1. Describe the structure and | usage of a graphic system in | n an industry by the knowle | dge gained on |
| CAD/CAM systems | | 5 - 5 | |
| 5 | es in calculating the and data p | points used in generating vario | us curves with |
| the help of modeling softwar | e 1 | 8 6 | |
| 1 0 | 0 1 | d develop the part programs | naccessory for |

- 3. Outline the working and application of NC machines and develop the part programs necessary for manufacturing a machine component using NC/CNC machines
- Modify the conventional manufacturing system to an organized system for increasing the production using proper planning and group technology techniques.
 Demonstrate the implementation of CAD/CAM techniques in a completely integrated manufacturing

| 5. Demonstrate the implementation of CAD/CAM techniques in a completely integrated manu | facturing |
|--|-----------|
| industry using CAQC and CIM knowledge | |
| Unit -1 | Hours |
| Introduction to CAD/CAM: Introduction to CAD/CAM/CIM, Sequential and concurrent engineering Fundamentals of CAD, Product cycle, Design process, CAD/CAM hardware CAD standards: Graphical Kernel System (GKS), Data exchange standards- IGES, STEP, CALS etc., and Communication standards Fundamentals of Computer Graphics: Raster scan graphics coordinate system, Database structure for graphics modeling, clipping, hidden surface removal. Unit -2 | 8 |
| Transformations of Geometry: Translation, Scaling, Reflection, Rotation, Homogeneous | |
| representation of transformation, Concatenation of transformations. Geometric Modelling of Curves: Wire frame modelling, Wireframe entities, Curve representation, Parametric representation of analytic curves, Parametric representation of Hermite cubic spline, Bezier and B-spline curves. Geometric Modelling of Surfaces: Surface modeling, Basic surface entities, Parametric representation of analytic & Synthetic surfaces. Geometric Modelling of Solids: Solid modeling, Solid entities, Boolean operations, Boundary representation of Solid Modelling, CSG approach of Solid Modelling. | 8 |
| Unit – 3 | |
| DRAFTING AND MODELING SYSTEMS: Basic geometric commands, layers, display control commands, editing, dimensioning, solid modelling. Computer Aided Manufacturing (CAM): Introduction to Computer Numerical Control (CNC), Basic components of NC system, NC coordinate system, Motion control systems, Feedback devices, CNC tooling, features of machining center, turning center. CNC Programming: Part programming fundamentals, Manual Part Programming, Computer assisted part programming, APT Programming, Geometric & motion commands, Post processor commands. | 12 |
| Unit – 4 | |
| Group Technology: Introduction, part families, parts classification and coding, features of parts classification of coding system, OPITZ, MICLASS and Production Flow Analysis, composite part concept, machine cell design and applications. Computer Aided Process Planning (CAPP) : Introduction to CAPP, Variant & Generative methods of CAPP, Benefits of CAPP. | 10 |
| Unit – 5 | |
| Computer Aided Quality Control: Introduction, Terminology in Quality control, Computer in QC, contact and noncontact inspection techniques, computer aided testing, integration of CAQC with CAD/CAM. Computer Integrated Manufacturing Systems (CIMS): Introduction to CIM, Scope of CIM, | 10 |
| Types of manufacturing systems, machine tools and related equipment, material handling systems, | |

| material requirement planning, computer control systems, human labor in manufacturing systems, | |
|--|--|
| CIMS benefits. | |
| | |

Course outcomes:

- 1. Demonstrate computer graphic system used for design & manufacturing in industries for production and services.
- 2. Develop newly transforms entities for 2D, 3D representations and generation of curves, surfaces and solids entities for a graphic system using the mathematical modeling techniques for a computer graphic system.
- 3. Develop designs and suitable part programs for working of a NC/CNC/DNC machine for machining any given component using the knowledge gained on the design tools and CNC machines.
- 4. Choose the best production system applicable for manufacturing a machine component using the planning and group technology techniques
- 5. Examine the adaptable automation in a manufacturing system for increasing the production using the computer aided quality control and computer integrated manufacturing techniques

generator, Fuel cells

Course outcomes:

On completion of this course, students should be able to:

1. List, describe the main sources of energy and describe the functions of the major equipment and auxiliaries of a Thermal power plants

2. Identify, demonstrate the components of an IC Engine and hydro power plant and compare the various combined cycle power plants.

3. Explain the basic principles of nuclear reactions and explain working principle of different types of nuclear power plants.

4. Apply the knowledge of Solar, Wind energy and Biomass, in generation of power.

5. Identify the principles of direct energy conversion systems and explain the basic principles of Geothermal, Tide and Wave Energy

Text Books:

| 2. | Describe the effect of process parameters. | | | | | |
| 3. | | | | | | |
| | Measure lengths, diameters and heights | | | | | |
| | Determine the pitch of screws and g | ears | | | | |
| | IMENTS | | | | | |
| 1. | Step turning and thread cutting on la | | | | | |
| 2. | Producing a hole on given specimen using drilling machine | | | | | |
| 3. | Producing a flat surface on given work piece using shaping machine | | | | | |
| 4. | Machining a spur gear using slotting machine | | | | | |
| 5. | Producing a keyway slot using milling machine | | | | | |
| 6. | Producing a cylindrical surface using cylindrical grinding machine | | | | | |
| 7. | Producing a flat surface using surface grinding machine | | | | | |
| 8. | Producing a flat surface using planer machine | | | | | |
| 9. | Grinding of single point cutting tool angles using tool & cutter grinding machine | | | | | |
| 10. | Measuring lengths, heights, diameters using vernier calipers, micrometer, height gauge | | | | | |
| | . Measuring bore diameter using internal micrometer and dial bore indicator | | | | | |
| | Measuring taper angle using bevel protractor, sine bar | | | | | |
| | 13. Measurement of pitch of screw and gear and clearance angle of cutting tool by tool maker's | | | | | |
| | microscope. | 6 8 | <i>C j</i> | | | |
| Course | outcomes: Upon successful complet | ion of this course, the students | will be able to: | | | |
| 1. | Understand the mechanism of chip f | | | | | |
| 2. | Analyze various cutting tool parame | | erations. | | | |
| 3. | Operate different machine tools. | | | | | |
| 4. | Apply the knowledge of different in | | | | | |
| 5. | Choose the appropriate measuring in | nstrument for a specific require | ement. | | | |

| Convey that "Genetics is to 1 Convey that without catalysis | biology what Newton's laws are s life would not have existed or id decoding genetic information | n earth. | istry. |
| Unit -1 | at the reductionist level. | | Hour |
| | lamantal differences hatween as | signed and engineering by drawing | nour |
| a comparison between eye and c of biology as an independent scie observations of the 18th Century | amera, Bird flying and aircraft. entific discipline. Why we need lead to major discoveries. Exa | cience and engineering by drawing Mention the most exciting aspect to study biology. How biological imples from Brownian motion and vation of Robert Brown and Julius | 10 |
| Unit -2 | | | |
| Classification: Hierarchy of life cellularity - Unicellular or multi and Carbon utilization -Autotrop uricoteliec, ureotelic (e) Habitat | cellular (b) ultra-structure- prol hs, heterotrophy, lithotropes (d) a- acquatic or terrestrial (e) M ms for the study of biology co | level- classification based on (a) karyotes or eucaryotes. (c) energy Ammonia excretion – aminotelic, Molecular taxonomy- three major ome from different groups. E.coli, sculus. | 10 |
| Unit – 3 | | | - |
| Concept of allele. Gene mapping part of genetics. Emphasis to be how genetic material passesfrom Molecules of life: Monomeric u cellulose. Amino acids and prote | , Gene interaction, Epistasis. M give not to the mechanics of parent to offspring. nits and polymeric structures. | ion and independent assortment. leiosis and Mitosis be taught as a cell division nor the phases but Discuss about sugars, starch and | 10 |
| Unit – 4 | | | |
| enzyme catalyze reactions - En Enzyme kinetics and kinetic par biology? RNA catalysis. Proteins: structure and function quaternary structure. Proteins as | zyme classification. Mechanis cameters. Why should we know | catalyzed reactions. How does an sm of enzyme actionexamples. w these parameters to understand e. Primary secondary, tertiary and s and structural elements. | 10 |
| <u>Unit – 5</u> | | | - |
| and endothermic versus undergo standard free energy - Spontar breakdown of glucose to CO_2 + CO_2 and H_2O (Photosynthesis). Concept of single celled org classification of microorganisms. | one and exergoinc reactions. C neity - ATP as an energy cu H_2O (Glycolysis and Krebs cyc ganisms: Concept of species | biological systems - Exothermic Concept of Keq and its relation to irrency. This should include the cle) and synthesis of glucose from and strains. Identification and ts of single celled organisms | 10 |
| Convey that classification p such as morphological, biocl | er say is not what biology is al | tury that lead to major discoveries. Il about but highlight the underlyir luring the passage of genetic mat | - |

4. Convey that all forms of life have the same building blocks and yet the manifestations are as diverse as

one can imagine.

5. Convey that "Genetics is to biology what Newton's laws are to Physical Sciences".

TEXT BOOKS

- 1. Biology: A global approach: Campbell, N. A.; Reece, J. B.; Urry, Lisa; Cain, M, L.; Wasserman, S. A.; Minorsky, P. V.; Jackson, R. B. Pearson Education Ltd.
- 2. Outlines of Biochemistry, Conn, E.E; Stumpf, P.K; Bruening, G; Doi, R.H., John Wiley and Sons.

REFERENCE BOOKS

- 1. Principles of Biochemistry (V Edition), By Nelson, D. L.; and Cox, M. M.W.H.Freeman and Company
- 2. Molecular Genetics (Second edition), Stent, G. S.; and Calender, R.W.H. Freeman and company, Distributed by Satish Kumar Jain for CBS Publisher.
- 3. Microbiology, Prescott, L.M J.P. Harley and C.A. Klein 1995. 2nd edition Wm, C.Brown Publishers.

- 1. Question paper contains 10 Questions, 2 from each course outcome. The student must answer 5 full questions by selecting one question from each course outcome (Internal Choice)
- 2. CO1- CO5 questions carries 14 marks each
- 3. Each full question will have sub question covering all topics under a course outcome.

INSTITUTE OF
TECHNOLOGY &
ENGINEERINGAccredited by NAAC with "A" Grade
Recognised by UGC under section 2(f) &12(B)
Approved by AICTE - NEW Delhi
Permanently Affiliated to JNTUK, SBTET
Ranked as "A" Grade by Govt. of A.P.

| | and analyze effects under diffe | rent forces and torques | |
| | - | rotating parts like clutches, brake | es and |
| 3. Identify the dynamic forces governors. | and torques developed in the | e rotating parts like cranks, flywhe | els and |
| 4. Estimate the unbalanced for engine. | rces and torques developed i | n rotating and reciprocating parts | s of an |
| 5. Identify different types of vib | prations in machine parts and e | evaluate their effects. | |
| Unit -1 | | | Hours |
| Precession : Gyroscopes, effect or motor car, motor cycle, aero plane | • | tability of moving vehicles such as | 8 |
| Unit -2 | | | |
| Friction: Inclined plane, friction wear, friction circle and friction a | | collar, uniform pressure, uniform | |
| Clutches: Friction clutches- sir centrifugal clutch. | gle disc or plate clutch, m | ultiple disc clutch, cone clutch, | 12 |
| - | - | expanding brake, band brake of rony, Rope brake, Epicyclic, Bevis | |
| Unit – 3 | | | |
| | of connecting rod, crank effor | r crank mechanism, inertia torque, rt and turning moment diagrams – | 12 |

| Governors : Watt, porter and proell governors, spring loaded governors– Hartnell and Hartung with auxiliary springs, effort, sensitiveness, isochronism and hunting. | |
|---|------------|
| Unit – 4 | |
| Balancing: Balancing of rotating masses single and multiple – single and different planes, using analytical and graphical methods. Primary and secondary balancing of reciprocating masses. Unbalanced forces and couples in multi cylinder engines: V-engines, in-line and radial engines for primary and secondary balancing. Locomotive balancing, hammer blow, swaying couple, variation of tractive effort. | 8 |
| Unit – 5 | |
| Vibrations: Introduction, Terms used in vibrations, Applications. | |
| Longitudinal Vibrations : Free vibration of spring mass system – Natural frequency-types of damping – damped free vibration. | |
| Forced Vibration: Simple problems on forced damped vibration, magnification factor, vibration isolation and transmissibility. | 10 |
| Transverse Vibrations: Transverse loads, vibrations of beams with concentrated and distributed loads. Dunkerly's method, Rayleigh's method, whirling of shafts, critical speeds. | |
| Torsional Vibrations: Two and Three rotor systems. | |
| Course outcomes: | |
| 1. Demonstrate the gyroscopic effect on moving bodies like aeroplane, ship, 2-wheeler and 4 vehicles in various conditions using the concepts of gyroscope | 1-wheeler |
| 2. Analyze the application and effect of friction in moving bodies like clutches, brakes and dynamin producing and transmission of energy. | nometers |
| 3. Identify the dynamic forces and torques developed in the rotating parts like cranks, flywl governors. | neels and |
| 4. Estimate the balanced and unbalanced forces and torques developed in rotating and reciprocatin an engine due to the presence of various components on the shaft. | g parts of |
| 5. Evaluate various types of vibrations and its effects produced like whirling, resonance and machine parts during stationary and working conditions. | others in |

SYNTHESIS AND CHARACTERIZATION OF MATERIALS

| | SEMESTER - V | Ι | |
|----------------------------------|--------------|----------------|----|
| Subject Code | 18MEMEP603B | Internal Marks | 30 |
| Number of Lecture Hours/Week | 3(L) | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| Credits – 03 | | | |

Course Objectives:

Enable the students to:

- 1. Students gains deeper knowledge and understanding about the synthesis of materials.
- 2. To understand the importance of improvement of synthesis and characterization of their materials.
- 3. Understand the requirements for suitable techniques for each deposition techniques used.
- 4. To understand various advanced characterization equipment used to characterize different types of materials.
- 5. Gain knowledge about thermal testings and characterizations on composite materials

| Unit -1 | Hours |
|---|-------|
| Synthesis of nano materials: Gold, Silver, different types of nano oxides, TiO2, ZnO by using sol-gel method, Co-precipitation, Hydrothermal, Microwave, thermal and bio synthesis methods, | 10 |
| Nano tubes and Nano wires, Carbon nano tubes, Graphene preparation, powder syntheses, crystal growth techniques, zone refining, properties and applications. | |
| Unit -2 | |
| Top down and bottom-up synthesis- Mechanical alloying, Mechanical ball-milling, Ion implantation, Inert gas condensation, Arc discharge, RF-plasma arc technique, Laser ablation, Template assisted synthesis, Clusters, Colloids, Zeolites, Porous silicon | 10 |
| Unit – 3 | |
| Deposition techniques: Chemical vapour deposition (CVD), Metal Organic chemical vapour deposition (MOCVD) Epitaxial growth techniques: Molecular beam epitaxy, Atomic layer deposition, Pulsed laser deposition, Pulsed electrochemical deposition, Magnetron sputtering, Spin coating, Introduction to Lithography techniques | 10 |
| Unit – 4 | |

| Principle, Theory, Working and Application; X-Ray Diffraction, Field Emission Scan | ng |
|--|-------|
| Electron Microscopy, High Resolution-Transmission Electron Microscopy, Atomic F | ce 10 |
| Microscopy, Scanning Tunnelling Microscopy. | |

Unit – 5

| Photoluminescence | Spectroscopy, | Raman | Spectroscopy, | X-Ray | Photoelectron | |
|------------------------|---------------------|-------------|---------------------|-------------|-----------------|----|
| Spectroscopy(XPS), | Thermal analysis - | - Different | ial Scanning Calc | orimetry (D | SC) – Thermo | |
| gravimetric Analysi | s (TGA)- Different | ial Therma | al Analysis (DTA | .) – Dynar | nic Mechanical | 10 |
| Analysis(DMA), Me | chanical Testing- N | ano Indenta | ation -Vibrating Sa | ample Mag | netometer, Zeta | |
| Potential and Particle | e size measurement | | | | | |

Course outcomes:

After the completion of the course students will be able to:

- 1. The students are expected to understand basic principles of the synthesis and characterization techniques presented in the course, specific usage, their advantages and limitations
- 2. To understand the role of Top down and bottom-up synthesis and their importance in materials property.
- 3. Students should be able to understand the requirements for suitable techniques for each deposition techniques used.
- 4. They should be able to operate the instruments based on the knowledge gained on various applications.
- 5. To analyze various thermal testings and mechanical nano Indentation

TEXT BOOKS:

- 1. Nano material, A.K. Bandyopadyay, New age Publishers
- 2. Material science and Technology: A comprehensive treatment, Robert W.Cahn, VCH
- 3. Engineering Mechanics of Composite Materials, Isaac and M Daniel, Oxford University Press

| ÷ | - | | |

Unit – 5

Steady State Heat Transfer Analysis: one dimensional analysis of a fin and two-dimensional analysis of thin plate, analysis of a uniform shaft subjected to torsion.

Dynamic Analysis: Formulation of finite element model, element consistent and lumped mass matrices, evaluation of Eigen values and Eigen vectors, free vibration analysis.

10

Course outcomes:

On the completion of this course, students are able to

- 1. Identify and formulate different stress and strain relations, displacement relations on a particular object using FEM methods.
- 2. Apply and solve different element shapes using stiffness matrix.
- 3. Differentiate and analyse different types of trusses and beams.
- 4. Apply one dimensional quadratic equation on isoparametric elements and numerical integrations.
- 5. Apply the dynamic analysis on various beam elements.

| Unit – 4 | | | |

Unit – 4

Automated Assembly Systems: System configurations, Parts delivery at workstations, and applications, quantitative analysis of assembly systems-Parts Delivery System at Workstations, Multi-Station Assembly Machines, Single Station Assembly Machines, Partial Automation.

12

Unit – 5

Introduction to IIoT: Characteristics of IIoT, levels & deployment templates, Sensing, Actuation,Communication Protocols, Machine-to-Machine Communications, Difference between IIoT andM2M, Communication modules - RFID, Bluetooth, Wi-Fi, Zigbee.

Course outcomes: At the end of the course the student will be in a position to:

- 1. Apply FMS with manufacturing systems including job- shop and mass production systems.
- 2. Determine the basic components and their functions of automated production lines.
- 3. Analyze materials handling and storage systems in manufacturing.
- 4. Differentiate various automated assembly systems.
- 5. Assess the characteristics of IIoT and Analyze the difference between M2M and IIoT.

| Total Number of Lecture Hours | 48 | Exam Hours | 03 |
| | Credits –1.5 | | |
| Course objectives: Students should be able | to | | |
| 1. Understand modeling tools for drawing | machine components | | |
| 2. Gain the knowledge of 3D drawing of m | achine components | | |
| 3. Gain the knowledge of Assembly drawin | ng of machine components | | |
| 4. Study the NC and CNC codes | | | |
| 5. Prepare simple parts on the CNC Machin | ning center. | | |
| 5. Trepare simple parts on the erve maenin | 0 | | |

Introduction to various modeling and simulation packages, their importance and applications in industries.

1. DRAFTING:

Development of part drawings for various components in the form of orthographic and isometric. representation of dimensioning and tolerances scanning and plotting. study of script, DXE and IGES files.

2. PART MODELING

- 1. 3D Solid part modeling of mechanical components
- 2. 3D Part modeling of mechanical components using revolve option
- 3. 3D Part modeling of mechanical components using hollow
- 4. 3D Part modeling of mechanical components using sweep
- 5. 3D Part modeling of mechanical components using swept boss
- 6. 3D Part modeling of mechanical components using boundary boss
- 7. 3D Part modeling of mechanical components using rib, pattern, draft

3. ASSEMBLY MODELING

- 8. Assembly of screw jack using Bottom-up approach
- 9. Assembly of any one cotter joint using Bottom-up approach

4. CNC MACHINING

- 10. Study of NC and CNC codes used in CNC machining.
- 11. NC Programming Practice for machining various components related to turning
- 12. NC Programming Practice for machining various components related to milling
- 13. Automated CNC Tool path & G-Code generation using Pro-E/Master CAM

Course outcomes: Upon Completion of this course, the students will be able to:

- 1. Identify the various sketch and part design tools in modeling software
- 2. Draw machine components by modeling software
- 3. Apply the knowledge of part drawing
- 4. Apply the knowledge of assembly drawing
- 5. Prepare part programme for engineering components on CNC Machining center

Soft Skills & Aptitude Builder – 2

| Subject Code | 18MEXXS6090 | IA Marks | 15+15 | |

| Unit – 1: Communicative Competence | | | Hours | |
| Verbal Reasoning: Reading Comprehension-Text Completion- Sentence Equivalence Spotting Errors, Sequencing of Sentences, Parallelism in Structure | | | | |
| E-Mail Etiquette, Reporting News Activity: Completing Exercises | | | | |
| Unit 2: Career and Employability Skills | | | | |
| What is a Career: Career vs Job, Career Values & Grid, Skills vs Strengths, Spotting Skills/Reflection of Present Skills, Meeting the Expectation of your Employer, Matching your Skills with the Required Skills, Preparing Resume, Preparing for Interviews & Structuring Answers | | | | |
| Activity: Resume Building, Interviews | | | | |
| | 4°4 1. D 911 | | | |

Section B, Aptitude Builder

Unit – 3: Time and Work

Pipes and Cisterns: Problems on Unitary method, Relation between Men, Days, Hours and Work, Problems on Man-Day-Hours Method, Problems on Alternate Days, Problems on Pipes and Cisterns.

Time , Distance and Speed, Problems on Trains, Boats and Streams: Relation between Speed, Distance and Time, Converting km/h into m/s and vice versa , Problems on Average Speed, Problems on Relative Speed, Problems on Circular Tracks, Problems on Races

6

7

Problems on Trains: Two Trains Moving in Opposite Direction, Two Trains Moving in same Direction, A Train Crossing a Stationary Object of a Given Length like a Platform or Bridge, A Train Crossing a Stationary Object like a Pole or a Man **Boats and Streams:** Time Based, which can be considered as a Point Object Speed Based, Distance Based, Average Speed Based

Unit - 4: Logical and Analytical Reasoning

Seating Arrangement: Linear Arrangement, Circular Arrangement, Tabler, Triangular Arrangement, Complex Arrangement.

Clocks : Finding the Angle When the Time is Given, Finding the Time When the Angle is Known, Relation between Angles, Minutes and Hours, Position of Hands of the Clock, Time Gained or Lost by the Clock, Mirror /Water Image-based Time.

Calendars : Definition of a Leap Year, Finding the Number of Odd Days, Framing the Year

Code for Centuries, Finding the Day of any Random Calendar Date

Syllogisms: Finding the Conclusions using Venn Diagram Method, Finding the Conclusions using Syllogism Method

Simple Interest: Definitions, Problems on Interest and Amount, Problems when Rate of Interest and Time Period are Numerically Equal

Compound Interest: Definition and Formula for Amount in Compound Interest, Difference between Simple Interest and Compound Interest for 2 Years on the Same Principle and Time Period.

Unit - 5: Permutations, Probability, Areas and Volumes

Definition of permutation , Problems on Permutations , Definition of Combinations , problems on Combinations

Probability: Definition of Probability, Problems on Coins, Problems on Dice, Problems on Deck of Cards, Problems on Years

Mensuration - 2D: Formulas for Areas, Formulas for Volumes of Different Solids, Problems on Areas

Mensuration - 3D: Problems on Volumes, Problems on Surface Areas

Text (T) / Reference (R) Books:

For Units 1 & 2

T1 Enhance Your Employability Skills, David Winter and Laura Brammar, University of London

7

- T2 R.S. Agarwal, Verbal & Non-Verbal Reasoning, S. Chand & Co., Latest ed. 2003
- R2 How to Prepare for Verbal Ability and Reading Comprehension, Arun Sharma, Meenakshi Upadhay, Mc Graw Hill

For Units 3, 4, & 5

T1 R S Agarwal, S Chand, 'Quantitative Aptitude'

T2 R S Agarwal, S.Chand, 'A modern approach to Logical reasoning'

R1 Quantitative Aptitude for CAT By Arun sharma

R2 GL Barrons, Mc Graw Hills, Thorpe's verbal reasoning, LSAT Materials

Course Outcomes: On completion of this course, students can

Section A: Soft Skills

- CO 1 learn and practice effective communication skills
- CO 2 develop broad career plans, evaluate the employment market, and become industry ready

Section B: Aptitude Builder

CO 3 develop accuracy on time and distance and units related solutions

- CO 4 solve the real-time problems for performing job functions easily
- CO 5 solve problems related to permutations and combinations, probability, areas and volumes

INSTITUTE OF
TECHNOLOGY &
ENGINEERINGAccredited by NAAC with "A" Grade
Recognised by UGC under section 2(f) &12(B)
Approved by AICTE - NEW Delhi
Permanently Affiliated to JNTUK, SBTET
Ranked as "A" Grade by Govt. of A.P.

| Credits – 03 | | | | |

Course Objectives:

Enable the students to

- 1. Understand the definition, scope, objectives, phases, models and limitations of operations research and developing the ability to formulate the linear programming problems for minimizing the project cost and maximizing its profit.
- 2. Solve linear programming problems using various techniques based on the constraints
- 3. Understand about different application areas of operations research like transportation problem, assignment model, sequencing models.
- 4. Suggest optimal sequence and replacement policy and economic order quantities to be maintained for better and economic growth of the industry.
- 5. Suggest optimal game strategies and estimation of waiting times in waiting line problems in the competitive business world.

| Unit -1 | Hours |
|--|------------|
| Introduction to Operations Research: Definition, Features, types of OR models, Methodology, | |
| Tools, Limitations and applications of Linear Programming. | 10 |
| Linear Programming-I: Introduction, Formulation of Linear Programming Problem (LPP), | |
| Assumptions for solving LPP, Applications of LPP, Graphical method of solving LPP. | |
| Unit -2 | |
| Linear Programming-II: Introduction, steps in solving problems using simplex method, Principle | |
| of simplex method- Maximization and minimization problems, solution by simplex method, | 10 |
| limitations of LPP simplex method. | 10 |
| Linear Programming-III: Introduction, Concept of primal, dual relationship, formulation of the | |
| dual of the primal problem, solution of LP problems using dual simplex method. | |
| Unit – 3 | |
| Transportation Problem: Basics, Solution of Transportation problem with several methods, | |
| performing optimality test, degeneracy in transportation problem. | |
| Assignment model: Definition, Formulation, Different methods of solutions, Hungarian assignment | 10 |
| method, unbalanced assignment problems, travelling salesman problems. | |
| Sequencing problems: introduction, basics, types of sequencing problems, priority sequencing, | |
| sequencing n-jobs through two machines, n-jobs and m-machines, two jobs 3-machines case. | |
| Unit – 4 | |
| Replacement: Introduction - replacement of items that deteriorate with time - when money value is | |
| not counted and counted - replacement of items that fail completely, group replacement. | 10 |
| Inventory Control: Introduction, Types of Inventories, Costs associated with inventories, the | |
| concept of EOQ, Deterministic inventory problems with no shortages, with shortage. | |
| Unit – 5 | |
| Queuing Theory: Introduction, Queuing system, elements of Queuing system Operating | |
| characteristics of a Queuing system, Classification of queuing models: Model-I [M/M/1:∞ / FIFO], | |
| Model-III [M/M/1: N/FIFO]. | 10 |
| Game Theory: Introduction, Two Person Zero sum games, Maximin - Minimax principle, Games | |
| without saddle points- mixed strategies, Graphical solution of 2Xn, mX2 games, and Dominance | |
| property, P-system, S-system, Q-system and Ss-system | |
| Course outcomes: | |
| 6. Formulate and solve mathematical model (linear programming problem) for real situations like p | roduction |
| and distribution of goods using basic linear programming techniques li graphical methods | |
| 7. Apply the concepts of linear programming for decision making like simplex and dual simplex algo | orithms in |
| production industries. | |
| 8. Calculate the optimal values of cost, job distribution and placement using transportation, assign | ment and |
| sequencing methods | |

- 9. Select the best optimal inventory and replacement time for the goods produced in an industry for its better and economic growth using inventory and replacement techniques.
- **10.** Select the best optimal time and strategy to be followed by any organization to identify the waiting times and strategies to be implemented using waiting lines and game theory techniques for a continuous and successful growth of an industry.

INSTRUMENTATION & MECHATRONICS LAB

| | SEMESTER - VII | | |
|-------------------------------|----------------|------------|----|
| Subject Code | 18MEMEL7070 | IA Marks | 15 |
| Number of Lecture Hours/Week | 3 | Exam Marks | 35 |
| Total Number of Lecture Hours | 39 | Exam Hours | 3 |
| | Credits – 1.5 | | |

Course objectives: The students should be able to:

- 1. Understand the experimental work in the laboratory and calibration of various instruments for measuring temperature, displacement
- 2. Measure low and medium pressures using Mechanical and Electrical sensors.
- 3. Measure flow, speed and vibration using analogue and digital sensors.
- 4. Characterize the load and displacement using transducer kit
- 5. Develop PLC programs for control of traffic lights, water level and lifts.

EXPERIMENTS

1. Instrumentation & Measurement

- 1. Displacement measurement by using capacitive trainer
- 2. Temperature measurement by using thermocouples
- 3. Pressure measurement by using bourdon tube pressure gauge.
- 4. Pressure measurement by using Mcleod gauge.
- 5. Flow measurement by using Rotameter.
- 6. Speed measurement by using Digital tachometer.
- 7. Vibration measurement by using seismic pickup.

2. DYNA 1750 Transducers Kit

- 8. Displacement measurement by using LVDT.
- 9. Load measurement by using strain gauge load cell.
- 10. Temperature measurement by using thermistors/RTD

3. PLC PROGRAMMING

- 11. Ladder Programming for digital & Analogy sensors
- 12. Ladder programming for Traffic Light control, Water level control and Lift control Modules
- Course outcomes: Upon successful completion of this course, the students will be able to:
- 1. Know requirement of calibration, errors in measurement of displacement and temperature
- 2. Select proper measuring instrument for measuring low and medium pressures.
- 3. Select proper measuring instrument for measuring flow, speed and vibration measurement.
- 4. Measure load, displacement and temperature using analogue and digital sensors.
- 5. Develop the PLC programs for Lift, water level control and traffic light

| Modeling & Analysis (Skill Oriented Course) | | | |
|--|-------------|------------|----|

| | Credits -2 | | |

Course objectives: Students should be able to

- 1. Know importance and applications of FEA package in industries
- 2. Analyze the structural analyses problems
- 3. Analyze the thermal & model analyses problems

INTRODUCTION

Introduction to various Finite Element Analysis (FEA) packages and their importance and applications in industries.

STRUCTURAL AND THERMAL ANALYSIS USING HYPER MESH

- 1. Determination of deflection and stresses in 2D and 3D trusses.
- 2. Determination of deflections in beams component and principal and Von-mises stresses in plane stress, plane strain and axi-symmetric components.
- 3. Determination of stresses in 3D and shell structures (at least one example in each case)
- 4. Estimation of natural frequencies and mode shapes, Harmonic response of 2D beam.
- 5. Steady state heat transfer analysis of plane and Axi-symmetric components.

Course outcomes: Upon Completion of this course, the students will be able to:

- 1. Apply the knowledge of FEA package for industrial applications
- 2. Solve 2D structural and axi-symmetric problems using analysis software
- 3. Compute heat transfer problems using analysis software

Accredited by NAAC with "A" Grade Recognised by UGC under section 2(f) &12(B) Permanently Affiliated to JNTUK, SBTET Ranked as "A" Grade by Govt. of A.P.

- 1. Question paper contains 10 Questions, 2 from each course outcome. The student must answer 5 full questions by selecting one question from each course outcome (Internal Choice)
- 2. All questions carries 14 marks each
- 3. Each full question will have sub question covering all topics under a course outcome

| Fundamentals of Mechanical Engineering SEMESTER - XX | | | |
|---|------|----------------|----|
| | | | |
| Number of Lecture Hours/Week | 3(L) | External Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| Credits – 03 | | | |

Course Objectives:

Enable the students to

- Understand the concepts of fluid properties like specific gravity, viscosity, density, surface tension 1.
- To study the classification of turbines and work done and efficiency of the different turbines and also 2. study about draft tube theory and to determine the function efficiency.
- To study about specific speed and performance characteristics of different types of turbines. 3.
- 4. To study automobile engine working, valve timing and associated systems such as lubricating system, cooling system, fuel feed system, ignition system etc., their necessity, requirements, construction details, different types and their working
- 6. To study the construction, working principles and advantages of belt and rope drives, selection of belt drive- types of belt drives, V-belts, types of coupling.

| Unit -1 | Hours |
|--|-----------|
| Fluid Mechanics: Dimensions and units: physical properties of fluids- specific gravity, viscosity | |
| and its significance, surface tension, capillarity, and vapor pressure. Atmospheric gauge and | 10 |
| vacuum pressure - Measurement of pressure. Manometers- Piezometer, U-tube, inverted and | |
| differential manometers. | |
| Unit -2 | |
| Impact of jets: hydrodynamic force of jets on stationary and moving flat, inclined, and curved | 10 |
| vanes, jet striking centrally and at tip, velocity diagrams, work done and efficiency, flow over | 10 |
| radial vanes. | |
| Unit – 3 | |
| Hydraulic Turbines and Governing systems: Classification of turbines; Working principle, | 10 |
| Efficiency calculation and Design principles for Pelton Wheel, Francis and for Kaplan turbines; | 10 |
| Governing of turbines; Performance and characteristic curves | |
| Unit – 4 | |
| I. C. Engines: Classification, working principles – valve and port timing diagrams – air standard | |
| cycles -fuel injection system, carburetion, ignition, cooling and lubrication - Engine performance | 10 |
| evaluation. | 10 |
| Spark Ignition and Combustion Ignition engines – Classification, working principles, Types of | |
| engines. | |
| Unit – 5 | |
| Belt drives: Introduction, Belt and rope drives, selection of belt drive- types of belt drives, V- | |
| belts, velocity ratio of belt drives, slip of belt, creep of belt, tensions for flat belt drive, angle of | 10 |
| contact, centrifugal tension, maximum tension of belt, | 10 |
| Coupling: Brief introduction of coupling, Rigid couplings - muff, split muff and flange couplings, | |
| flexible couplings - flange coupling | |
| Course outcomes: | |
| 1. Understand the concepts of fluid properties like specific gravity, viscosity, density, surface tens | |
| 2. To study the classification of turbines and work done and efficiency of the different turbines a | and also |
| study about draft tube theory and to determine the function efficiency. | |
| 3. This study is also used for the estimation of efficiency and performance of the turbine with the | study of |
| characteristics curves. | |
| 4. To study automobile engine working, valve timing and associated systems such as lubricating | |
| cooling system, fuel feed system, ignition system etc., their necessity, requirements, cons | truction |
| details, different types and their working | 1 . 14 |
| 5. To study the construction, working principles and advantages of belt and rope drives, selection drives, trace of belt drives. Whether trace of counting | m or beit |
| drive- types of belt drives, V-belts, types of coupling. | |

| This course will enable students to: | | | |

- 1. Classify different bonds in solids and understand crystallization of the metals, for the formation of the solid solutions and compounds.
- 2. Understand different phase diagrams .
- 3. Recorgnize the property requirements of a given application and suggest a suitable ferrous and non ferrous metal and their alloys.
- 4. Illustrate the property requirements of a given application and suggest appropriate heat treatment
- 5. Identify the property requirements of a given application and suggest a suitable ceramics, composite materials
- 6. Identify the relationships between structure, composition and properties of different engineering materials.

| Unit -1 | Hours |
|--|----------|
| Structure of Metals and Constitution of alloys: Bonds in Solids – Metallic bond - crystallization of metals, grain and grain boundaries, effect of grain boundaries on the properties of metal / alloys – determination of grain size. Necessity of alloying, types of solid solutions, Hume Rothery's rules, intermediate alloy phases, and electron compounds. Tensile, compression and torsion tests; Young's modulus, relations between true and engineering stress-strain curves, generalized Hooke's law, yielding and yield strength, ductility, resilience, toughness and elastic recovery. | 10 |
| Unit -2 | |
| Equilibrium Diagrams: Experimental methods of construction of equilibrium diagrams, Isomorpous alloy systems, equilibrium cooling and heating of alloys, lever rule, coring, miscibility gaps, eutectic systems, congruent melting intermediate phases, peritectic reaction. Transformations in the solid state – allotropy, eutectoid, peritectoid reactions, phase rule, relationship between equilibrium diagrams and properties of alloys. | 8 |
| Unit - 3 | |
| Ferrous & non-ferrous metals and their alloys Structure and properties of white cast iron, malleable cast iron, grey cast iron, spheroid graphite cast iron, alloy cast irons. Classification of steels, structure and properties of plain carbon steels, low alloy steels, Hadfield manganese steels, tool and die steels. Structure and properties of copper and its alloys, Aluminum and its alloys, Titanium and its alloys | 12 |
| Unit – 4 | |
| Heat treatment of Alloys: Annealing, normalizing, hardening, TTT diagrams, tempering, hardenability, surface-hardening methods (carburizing, carbo-nitriding, cyaniding, induction hardening and flame hardening), age hardening treatment, and cryogenic treatment of alloys. vacuum and plasma hardening | 8 |
| Unit-5 | |
| Ceramic and composite materials: Crystalline ceramics, glasses, cermets, abrasive materials, nanomaterial's – definition, properties and applications of the above. Classification of composites, various methods of component manufacture of composites, particle – reinforced materials, fiber reinforced materials, metal ceramic mixtures, metal – matrix composites and C – C composites. | 12 |
| Course outcomes: On completion of the course, student will be able to | n of the |
| Classify different bonds in solids and understand crystallization of the metals, for the formation solid solutions and compounds. Different phase diagrams and study of binary phase diagrams Recorgnize the property requirements of a given application and suggest suitable ferrous | |
| ferrous alloys Analyze the property requirements of a given application and suggest appropriate heat treatment Identified the property requirements of a given application and suggest suitable ceramics, composite materials Understand the relationships between structure, composition and properties of different engine | est a |

| FLUID MECHANICS AND FLUID MACHINERY SEMESTER -XX | | | | |
|---|------|----------------|----|--|
| Subject Code18XXMEOX0XHInternal Marks30 | | | | |
| Number of Lecture Hours/Week | 3(L) | External Marks | 70 | |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 | |
| Credits – 03 | | | | |

Course Objectives

- 1. Understand the fundamental properties of fluid and calculate fluid pressure using the manometer.
- 2. Apply the differential conservation equations of mass, momentum, and energy to fluid flow problems.
- 3. Evaluate major and minor losses in pipes and also discuss boundary layer concepts.
- 4. Solve problems on the turbo machines like turbines using analytical method and velocity triangles.
- 5. Discuss the Classification and working principles of pumps and evaluate the performance of hydraulic machines.

| Unit -1 | Hours |
|--|-------|
| Fluids: Definition of fluid, Fluid properties, Atmospheric gauge and vacuum pressure – measurement of pressure. Manometers- Piezometer, U-tube, inverted and differential manometers. Pascal's law, hydrostatic law. Buoyancy, forces on submerged bodies, stability of floating bodies. | 10 |
| Unit -2 | |
| Fluid Kinematics: Introduction, flow types. Equation of continuity for one dimensional flow. Stream line, path line and streak lines and stream tube. Stream function and velocity potential function. Fluid Dynamics: surface and body forces –Euler's and Bernoulli's equations for flow along a stream line, momentum equation and its applications, force on pipe bend. | 10 |
| Unit – 3 | |
| Closed Conduit Flow: Reynold's experiment- Darcy Weisbach equation, Minor losses in pipes- pipes in series and pipes in parallel- total energy line hydraulic gradient line. Basics of Turbo Machinery: Hydrodynamic force of jets on stationery and moving flat, inclined, and curved vanes, jet striking centrally and at tip, velocity diagrams, work done and efficiency, flow over radial vanes. | 10 |
| Unit – 4 | |
| Turbines: Hydraulic Turbines: classification of turbines, Working and | 10 |

efficiencies of Pelton wheel, Francis and Kaplan turbines. Importance of Draft Tube.

Hydraulic Quantities: Unit and specific quantities, characteristic curves, governing of turbines, selection of type of turbine, cavitation, surge tank, water hammer.

Unit – 5

Pumps: Centrifugal Pumps: Classification, working, work done – manometric head losses and efficiencies- specific speed- pumps in series and parallel performance characteristic curves, cavitation & NPSH. Reciprocating Pumps: Working, Discharge, slip, indicator diagrams.

Reciprocating Pumps: Working, Discharge, slip, indicator dia

Course outcomes:

1.Demonstrate various properties of fluids, pressure measurement devices and their applications.

10

2. Identify the kinematics and dynamics properties of fluids flowing in different conditions and its effects on the bodies.

3.Estimate the effect of various losses in fluids due to flowing and obstructions and understand using the concepts of pipe losses and Boundary layer theory.

4. Analyze the performance of hydraulic turbines, units and specific quantities based on the design by applying the knowledge of turbomachinery using analytical methods and velocity triangles.

5. Analyze the performance of various hydraulic pumps based on workings and design.

TEXT BOOKS

- 1. Hydraulics, fluid mechanics and Hydraulic machinery Modi and Seth
- 2. Fluid Mechanics and Hydraulic Machines/ RK Bansal/Laxmi Publications (P) Ltd.

REFERENCE BOOKS

- 1. Fluid Mechanics and Hydraulic Machines by Rajput
- 2. Fluid Mechanics & Turbo machinery by Dixon, 7th Edn, Elesvier
- 3. Fluid Mechanics and Machinery by D. Rama Durgaiah, New Age International
- 4. Fluid Mechanics- Fundementals and Applications by Y.A. Cengel, J.M.Cimbala, 6th Edn, McGrawHill
- 5. Fluid Mechanics and Fluid Power Engineering by D.S. Kumar, Kotaria& Sons.

Question paper pattern:

1. Question paper contains 10 Questions, 2 from each course outcome. The student must answer 5 full questions by selecting one question from each course outcome (Internal Choice)

- 2. All questions carries 14 marks each
- 3. Each full question will have sub question covering all topics under a course outcome

paints – Painting of new/old wood- Varnish. Form Works and Scaffoldings.

Course outcomes:

On completion of this course, students are able to

- 1. Identify different building materials and their importance in building construction.
- 2. Differentiate brick masonry, stone masonry construction and use of lime and cement in various constructions.
- 3. Importance of building components and finishings.
- 4. Classification of aggregates, sieve analysis and moisture content usually required in building construction.
- 5. Understand the roleof different floors, paints, Damp Proofing, structural elements

| Pre-requisite | Engineering Mathematics | | | 00 |
| Course Objectives: | | | | |
| This course will enable students to | | | | |
| 1. Understand signals and systems cl | lassification | | | |
| 2. Explain convolution and represent | | | | |
| 3. Understand frequency domain rep | | | | |
| 4. Explain the applications of fourier | representation | | | |
| Unit -1 | | | Ho | urs |
| Introduction: Definitions of a signal | and a system, classification of | signals, basic | | |
| Operations on signals, elementary si | | | 1 | 0 |
| operations, properties of systems | | | | |
| Unit -2 | | | | |
| Time-domain representations for 1 | LTI systems: Convolution, imp | ulse response | | |
| representation, Convolution Sum and | | | 1 | 0 |
| response representation, Differential a | | | | |
| diagram representations. | 1 1 | , | | |
| Unit -3 | | | | |
| Frequency-domain representation | for signals: Introduction, Discr | rete-time and | | |
| continuous time Fourier series (deriv | | | 1 | 0 |
| Discrete-time and continuous-time F | | | 1 | 0 |
| excluded) and their properties. | | | | |
| Unit – 4 | | | | |
| Applications of Fourier representat | ions: Introduction, Frequency res | ponse of LTI | Ç | |
| systems, Fourier transform represent | tation of periodic signals, Four | ier transform | Ş | 1 |
| representation of discrete time signals. | | | | |
| Unit – 5 | | | | |
| LAPLACE & Z-TRANSFORMS: In | ntroduction, Concept of region of | convergence | | |
| (ROC) for Laplace transforms, const | | | | |
| Properties of L.T's, Inverse Laplace tr | ransform, Relation between L.T's, | and F.T. of a | (| |
| signal. Z-Transforms: Introduction, Z- | transform, properties of ROC, pro- | perties of Z – | Ç | 1 |
| transforms, inversion Z-transforms. Z-7 | Fransform analysis of LTI Systems | , unilateral Z- | | |
| Transform and its application to solve c | lifference equations | | | |
| Course outcomes: Students will be abl | le to | | | |
| 1. Understand signal and its basic ope | rations | | | |
| 2. Understand linear time invariant sy | stems. | | | |
| 3. Apply the concepts of Fourier se | ries representations to analyze co | ontinuous and c | liscrete | e time |
| periodic signals. | | | | |
| 4. Understand and apply the continuo | us time Fourier transform, discrete | time Fourier tra | nsform | ı, |
| 5. Apply the concepts of Laplace tran | sform, and z-Transform to the ana | lysis and descri | ption of | of LT |
| continuous and discrete-time syster | ns | | | |

Course Objectives:

The learning objectives of this course are:

1. To have a basic proficiency in a traditional AI language including an ability to write simple to intermediate programs and an ability to understand code written in that language

2. To have an understanding of the basic issues of knowledge representation and blind and heuristic search, as well as an understanding of other topics such as minimax, resolution, etc. that play an important role in AI programs

3. To have a basic understanding of some of the more advanced topics of AI such as learning, natural language processing, agents and robotics, expert systems, and planning.

| Unit -1: Introduction to artificial intelligence | Hours |
|--|-------|
| Introduction, history, intelligent systems, foundations of AI, applications, tic-tac-tie | 08 |
| game playing, development of AI languages, current trends in AI. | 00 |
| Unit -2 : Problem solving: state-space search and control strategies | |
| Introduction, general problem solving, characteristics of problem, exhaustive | 10 |
| searches, heuristic search techniques, iterative deepening a*, constraint satisfaction. | 10 |
| Unit – 3:Problem reduction, Game playing & Logic Concepts | |
| Problem Reduction: Introduction, Problem reduction using AO* algorithm, Towers | 10 |
| of Hanoi problem, Matrix Multiplication problem game playing, alpha-beta | 10 |
| pruning, two-player perfect information games. | |
| Unit – 4: Logic Concepts & Knowledge Representation Techniques | |
| Logic Concepts: Introduction, propositional calculus, propositional logic, natural | |
| deduction system, axiomatic system, semantic tableau system in proportional logic, | |
| resolution refutation in proportional logic, predicate logic. | 10 |
| Introduction to KR techniques, conceptual dependency theory, script structure, cyc | |
| theory, case grammars, semantic web. | |
| Unit – 5: Expert systems and its applications | |
| Introduction phases in building expert systems, expert system versus traditional | |
| systems, rule-based expert systems, blackboard systems, truth maintenance systems, | 12 |
| application of expert systems, list of shells and tools. | |

| Cour | Course Outcomes: On completion of this course, students can | | | |
|------|--|--|--|--|
| CO1 | To introduce basic concepts of AI with its working principles. | | | |
| CO2 | To understand different kinds of heuristic search algorithms to get feasible solution for AI problems. | | | |
| CO3 | To understand problem reduction concepts using various problem reduction techniques. (Ex: Problem reduction using AO* algorithm, Towers of Hanoi problem, Matrix Multiplication problem) | | | |
| CO4 | To understand various Knowledge Representation (KR) techniques | | | |
| CO5 | To understand different kinds of Expert Systems. | | | |

| Cours | Course Outcomes: On completion of this course, students can | | | |
| CO1 | Recognize the basic elements of a relational database management system. | | | |
| CO2 | Design entity relationship and convert entity relationship diagrams into RDBMS. | | | |
| CO3 | Design relational algebra and calculus to create, maintain, and manipulate a relational | | | |
| | database using SQL. | | | |
| CO4 | Implement normalization techniques for logical schema models. | | | |
| CO5 | Estimate concurrent issues and problems through locking mechanism. | | | |

| Cour | se Outcomes: On completion of this course, students can |
| CO1 | Demonstrate the evolution of Computer System organization and Operating system |
| | services. |
| CO2 | Design solutions for process synchronization problems by using System calls and |
| | Inter process communication. |
| CO3 | Identify the functionality involved in process management concepts like scheduling |
| | and synchronization. |
| CO4 | Design models for handling deadlock and perform memory management. |
| CO5 | Analyze services of I/O subsystems and mechanisms of security & protection. |

| CO1 | Demonstrate knowledge and understanding of the security and ethical issues of the | | | |
| | Internet of Things | | | |
| CO2 | Conceptually identify vulnerabilities in Internet of Things | | | |
| CO3 | Conceptually identify recent attacks, involving the Internet of Things | | | |
| CO4 | Develop critical thinking skills | | | |
| CO5 | Compare and contrast the threat environment based on industry and/or device type. | | | |

| | BLOCK CHAIN | | |
|--|--|---------------------|-----------|
| Subject Code | | IA Marks | 30 |
| Number of Lecture Hours/Week | 3 | Exam Marks | 70 |
| Total Number of Lecture Hours | 50 | Exam Hours | 03 |
| | Credits – 03 | · | |
| Course Objectives: | | | |
| The learning objectives of this cours | e are: | | |
| 1. To assess blockchain application | ns in a structured manner. | | |
| 2. To impart knowledge in block of | chain techniques and able to pre | esent the concepts | s clearly |
| and structured. | | _ | |
| 3. To get familiarity with future cu | rrencies and to create own crypt | to token. | |
| Unit -1: Introduction | | | Hours |
| Overview of Block chain, public lec | - | | |
| chain, transactions, distributed of | | | |
| understanding crypto currency to bl | - | | 08 |
| overview of security aspects of block | | | |
| of a hash function, hash pointer a | | ure, public key | |
| cryptography, a basic crypto currenc Unit -2 :Understanding block chai | | | |
| Creation of coins, payments and | | ts bitcoin D2D | |
| network, transaction in bitcoin network | 1 0 1 | | |
| relay, distributed consensus in open | • • • • | | 10 |
| Proof of Work (PoW)- Basic Introdu | | | 10 |
| PoW and the monopoly problem, Pro | | | |
| time, the life of a bitcoin miner, Min | - | | |
| Unit – 3:Permissioned Block Chair | | | |
| Permissioned model and usecases, | design issues for permissioned | d block chains, | |
| execute contracts, state machine re- | eplication, overview of consen | sus models for | 10 |
| permissioned block chain, Distribu | ted consensus in closed envir | onment, paxos, | 10 |
| RAFT consensus, Byzantine generation | | | |
| Lamport-Shostak-Pease BFT algorith | | stems. | |
| Unit – 4:Enterprise application of | | | |
| Cross border payments, Know Y | | 00 | 4.0 |
| block chain, Block chain enabled | trade, trade finance network | , supply chain | 10 |
| financing, identity on block chain. | | | |

| | VIRTUAL REALITY | |
|---|---|-----------|
| Subject Code | IA Marks | 30 |
| Number of Lecture Hours/Week | 3 Exam Marks | 5 70 |
| Total Number of Lecture Hours | 50 Exam Hours | 03 |
| | Credits – 03 | |
| Course Objectives: | | |
| The learning objectives of this cours | se are: | |
| 1. Understand how the design of V | /R technology relates to human perception and co | ognition. |
| 2. Discuss applications of VR to t | the conduct of scientific research, training, and i | ndustria |
| design. | | |
| 3. Gain first-hand experience wi | th using virtual environment technology, inclu | ding 3I |
| rendering software, tracking h | ardware, and input/output functions for captur | ing use |
| data. | | |
| 4. Learn the fundamental aspec | ts of designing and implementing rigorous e | empirica |
| experiments using VR. | | |
| 5. Learn about multimodal virtua | l displays for conveying and presenting informa | tion and |
| techniques for evaluating good | and bad virtual interfaces. | |
| Unit -1:Virtual reality and Virtua | | Hours |
| Introduction, Computer graphics, R | Real time computer graphics, flight simulation, | |
| virtual environment requirement, be | enefits of virtual reality, historical development | |
| | ommuter Graphics: Introduction, virtual world | 08 |
| | ver, perspective projection, human vision, stereo | 00 |
| perspective projection, 3D clipping, Colour theory, simple 3D modelling, | | |
| Illumination models, reflection m | nodels, shading algorithms, radiosity, hidden | |
| surface removal, realism- stereograp | bhic image. | |
| Unit -2 :Geometric Modelling | | |
| Introduction, from 2D to 3D, 3I | D space curves, 3D boundary representation. | |
| Geometric transformation: Intro | oduction, frames to reference, modelling | 10 |
| transformations, instances, picking, | flying, scaling the VE, Collision and detection. | 10 |
| Generic VR system: Virtual environ | nment, computer environment, VR technology- | |
| models of interaction, VR systems. | | |
| Unit – 3:Animating the Virtual Er | nvironment | |
| Introduction, the dynamics of nu | imbers, linear and non-linear and non-linear | |
| interpolation, the animation of obje | ects, linear and non-linear translation, shape & | 10 |
| object in between, free from defor | rmation, particle system. Physical Simulation: | 10 |
| Objects falling in a gravitationa | al field, rotating wheels, elastic collisions, | |
| projectiles, simple pendulum, spring | s, flight dynamics of an aircraft | |
| Unit – 4:Human Factors | | |
| the eye, the ear, the somatic senses. | VR Hardware: Sensor hardware, head-coupled | |
| | rated VR systems. VR Software: Modelling | 10 |
| displays, acoustic hardware, integ | | 1 |
| | · · · · | |
| displays, acoustic hardware, integ virtual world, physical simulation, V Unit – 5:VR Applications | · · · · | |
| virtual world, physical simulation, V Unit – 5:VR Applications | · · · · | 12 |

| Cours | se Outcomes: On completion of this course, students can | | |
| CO1 | Understand Java programming concepts and utilize Java Graphical User Interface in | | |
| | Program writing. | | |
| CO2 | Write, compile, execute and troubleshoot Java programming for networking concepts. | | |
| CO3 | Build Java Application for distributed environment. | | |
| CO4 | Design and Develop multi-tier applications. | | |
| CO5 | Identify and Analyze Enterprise applications. | | |

| Number of Lecture Hours/Week 3 Exam Marks 70 Total Number of Lecture Hours 50 Exam Hours 03 Credits – 03 Course Objectives: The learning objectives of this course are: To provide in depth knowledge and hands on experience in application development, the latest trends and features. Unit -1: Android Programming Environment Android programming environment, linking activities using intents, calling built-in applications using intents. Hours Android programming environment, linking activities using intents, calling built-in applications, build basic views, build picker views, build list views, Using image views, Using menus with views, Saving and loading user preferences 10 Unit - 3:Data Persisting data to files, Creating and using databases, Study Session, sharing data in android, Using a content provider, Creating a content provider 10 Unit - 5: Services Creating your own services, communicating between a service and an Activity, Binding Activities to Services, A complete lab work for Android service development, Deploy APK files. | Course Objectives: | | | |
| The learning objectives of this cours | se are: | | |
| 1. This course is designed to introdu | ce students with no programming | g experience to the | ne |
| programming languages and techniq | ues associated with the World W | ide Web. The co | urse |
| will introduce web-based media-rich | n programming tools for creating | interactive web | pages. |
| Unit-1: HTML | | | Hours |
| HTML: Basic Syntax, Standard H | TML Document Structure, Basic | Text Markup, | |
| Html styles, Elements, Attributes, H | Heading, Layouts, Html media, If | frames Images, | |
| Hypertext Links, Lists, Tables, Form | ns, GET and POST method, HTM | AL 5, Dynamic | 10 |
| HTML. | | | |
| CSS: Cascading style sheets, Level | | ation Formats, | |
| Selector Forms, The Box Model, Co | onflict Resolution, CSS3. | | |
| Unit -2: JSON | | | |
| Introduction to JSON: JSON, Syn | • 1 | • | |
| JSON Vs XML, the JavaScript X | 1 1 | , | 10 |
| Client-Side Frameworks, JSON and | l NoSQL, JSON on the server sid | e. | |
| Unit –3: YAML | | | |
| Introduction to YAML: YAML | | | 08 |
| documents, YAML vs JSON and 2 | XML, data types, Using advance | ed features like | 00 |
| anchors in a YAML. | | | |
| Unit -4: PHP | | | |
| PHP Programming: Introduction | to PHP, Creating PHP script, | Running PHP | |
| script. | | | 10 |
| Working with variables and cons | stants: Using variables, Using o | constants, Data | 12 |
| types, Operators. | | | |
| Controlling program flow: Cond | itional statements, Control state | ments, Arrays, | |
| functions. | | | |
| Unit – 5: Laravel | nouting controllers views D | lada tammalata | |
| Introduction to Laravel, Features, | routing, controllers, views, B | lade template, | 10 |
| migration, Laravel Database. | | | |

| Credits – 03 | | | ~ | |
| Course Objectives: | | | | |
| The learning objectives of this course are: | | | | |
| 1. To have a basic proficiency in a traditional AI lang | uage incl | luding an abili | ity to write | simple |
| to intermediate programs and an ability to understand | | | | 1 |
| 2. To have an understanding of the basic issues of k | | | | nd and |
| heuristic search, as well as an understanding of other | | | | |
| that play an important role in AI programs | - | | | |
| 3. To have a basic understanding of some of the more | advance | ed topics of A | I such as le | arning, |
| natural language processing, agents and robotics, expe | ert syster | ns, and planni | ng. | _ |
| Unit -1: Introduction to artificial intelligence | | | Hou | rs |
| Introduction, history, intelligent systems, foundations | s of AI, | applications, | 08 | |
| tic-tac-tie game playing, development of AI language | ges, curre | ent trends in | | |
| AI. | | | | |
| Unit -2 : Problem solving: state-space search and c | ontrol s | trategies | | |
| Introduction, general problem solving, character | | T . | 10 | |
| exhaustive searches, heuristic search techniques, iterative deepening a*, | | | 10 | |
| constraint satisfaction. | | | | |
| Unit – 3:Problem reduction, Game playing & Logi | | | | |
| Problem Reduction: Introduction, Problem red | | 0 | 10 | |
| algorithm, Towers of Hanoi problem, Matrix Mu | - | - | 10 | |
| game playing, alpha-beta pruning, two-player perfect | | | | |
| Unit – 4: Logic Concepts & Knowledge Representa | | | | |
| Logic Concepts: Introduction, propositional calculus | · • • | 0 | | |
| natural deduction system, axiomatic system, semant | | - | | |
| proportional logic, resolution refutation in proportional logic, predicate | | | | |
| logic. | | | | |
| Introduction to KR techniques, conceptual dependent | lency th | neory, script | | |
| structure, cyc theory, case grammars, semantic web. | | | | |
| Unit – 5: Expert systems and its applications | | | | |
| Introduction phases in building expert systems, e | | | | |
| traditional systems, rule-based expert systems, black maintenance systems, application of expert system | - | | 12 | |
| tools. | s, 11st 0 | i shens and | | |
| 10010. | | | | |

| W2 | https://www.coursera.org/courses?query=artificial%20intelligence |
| Cour | rse Outcomes: On completion of this course, students can |
| CO1 | To introduce basic concepts of AI with its working principles. |
| CO2 | To understand different kinds of heuristic search algorithms to get feasible solution for |
| | AI problems. |
| CO3 | To understand problem reduction concepts using various problem reduction |
| | techniques. (Ex: Problem reduction using AO* algorithm, Towers of Hanoi problem, |
| | Matrix Multiplication problem) |
| CO4 | To understand various Knowledge Representation (KR) techniques |
| CO5 | To understand different kinds of Expert Systems. |
